SECTION 2 - RULES AND REGULATIONS

2.12 Mileage Measurements

2.12.1 The mileage between rate centers is calculated based on V and H coordinates as obtained by reference to AT&T Tariff FCC No. 10. Calculation between Serving Wire Centers is based on V and H coordinates as obtained by reference to NECA FCC Tariff No. 4. The mileage for a call between Access Lines associated with stations that use the same rate center is one mile. If Feature Group B is used, the distance will be measured from the rate center of the tandem location or network site to which the Feature Group B line is connected. If Feature Group D access is used, the distance will be measured from the rate center of the calling number.

2.12.2 Airline mileage between service locations is calculated as follows:

Airline mileage is calculated as follows:

The square root of:
$$\frac{(V_1-V_2)^2 + (H_1-H_2)^2}{10}$$

Where V_1 and H_1 are the V and H coordinates of point 1 and V_2 and H_2 are the coordinates of point 2.

Mileage is rounded up to an integer value to determine the airline mileage.

2.13 Timing of Calls

The Customer's long distance usage charge is based on the actual usage of the long distance network. Usage begins when the called party picks up the receiver and the local telephone company sends a signal to the switch which utilizes hardware answer supervision or software tone detection. A call is terminated when the calling party hangs up.

SECTION 2 - RULES AND REGULATIONS

2.13 Timing of Calls (continued)

2.13.2 Chargeable time ends when the calling station hangs up thereby releasing the network connection. If the called station hangs up but the calling station does not, chargeable time ends when the network connection is released either by the automatic timing equipment in the telecommunications network or by the operator.

2.14 Rate Periods

Different rates may be applicable to a call at different times of the day and on certain days of the week, as specified in the appropriate rate schedule for that call. All times shown are local time at the calling station in the case of an outbound call and at the called station in case of an inbound toll free call.

2.15 Determining Rate In Effect

For outbound Services that are time-of-day sensitive, the time-of-day at the central office or POP associated with the calling station determines the rate in effect. For Toll Free Services that are time-of-day sensitive, the time-of-day at the central office or POP associated with the called station determines the rate in effect. If a unit of time is split between two (2) or more rate periods, each rate period applies to the portion of the call that occurred during that rate period rounded to the nearest billing increment. If a call is completed by an operator, the time at the beginning of each initial or additional rate period determines the applicable rate period. When a message spans more than one rate period, total charges for each rate period are calculated and the results for each rate period are totaled to obtain the total message charge.

SECTION 3 - DESCRIPTION OF SERVICES

3.1 Prepaid Long Distance Service

3.1.1 Description of Service

Prepaid Long Distance Service is a prepaid telephone Service that allows Customers to obtain a predetermined amount of access to the Company's long distance Services. The Company does not serve as the Customer's Primary Interexchange Carrier. Prepaid Long Distance Service is available via a domestic TFAN and an Authorization Code. This Service is a dollar based Service, meaning that there is a fixed amount of dollars (i.e., \$5, \$10, \$20, \$50, or some other denomination) available to the Customer who purchases the Service.

The Customer dials a domestic TFAN and hears recorded messages that guide the Customer through the Platform. The Platform validates the Customer's Authorization Code, determines whether sufficient time or value remains on the account and, if so, completes the call to the called telephone number dialed by the Customer. The Customer is verbally informed of the available balance of the account. The Customer may place calls from any location where such access is made available at the sole discretion of the Carrier. All Calls are billed in one minute increments subject to a minimum connect time of one minute. All calls are rounded to the next highest minute.

Calls are real-time rated during call progression. The total price of each call, including applicable taxes, is calculated on the basis of usage and any applicable recurring and non-recurring charges. The total price is deducted from the available account balance associated with each account. The Platform decrements the Customer's account balance as the Customer conducts a call. The Customer receives a warning tone one minute before the balance reaches zero. Calls in progress will be terminated when there is an insufficient balance to continue the call.
