Comment: "I have grave concerns regarding the impact that climate change is having on Idaho and the world. The number and frequency of hot days, especially in the early fall during elk hunting season is most troubling to me, as the warmer weather makes the processing of elk more difficult. Often it now seems like days in the 70's and 80's are frequent during the early parts of the season. Additionally, I am very concerned about water temperatures and how warm river temps impact the fish. I love to fish, but between the poor salmon and steelhead runs, and warm water temps, it is clear to me that my forefathers and current leaders are not taking good care of this amazing resource that God has given us to steward. Please divest of fossil fuel power generation and do everything you can to support salmon and steelhead runs throughout the Pacific NW. Sincerely, Jeremy Grimm"

Name of Utility Company: Avista
Case ID: AVU-E-19-01

Comment: "As an Idaho Avista customer, I strongly encourage the Idaho PUC to require Avista to shorten its plan to 100% clean energy and to stop using coal as soon as possible. Thank you."

Name: Stephan Flint
Email: flint.stephan@gmail.com
Telephone: 208-882-8621
Address: 4961 Lenville Rd
Moscow, ID 83843-7464

Name of Utility Company: expect to move into Avista territory soon
Case ID: AVU-E-19-01

Comment: "I appreciate that Avista is committed to phase out power production from coal and hope it can be done as rapidly as possible. I realize the commission cannot currently include the various external risks from fossil fuel power production in its analysis, but I hope this can change in the near future."

Subject: Idaho / Avista Public meeting to Push for Green Energy Support

Please work to offer Idaho customers the same support for Green Energy that Washington State has, create more local jobs with Green Energy. Fossil Fuels are a dead end, dangerous, polluting, causing tragic Climate Change.

Avista must take their head out of the sand and support and promote Green Energy and STOP using fossil Fuels, our very life and world depend on it.

Comment: "Avista IRP 2020 Hearing 8/5/2020 Comments; Alan Poplawsky Both the U.S. 2018 Fourth National Climate Assessment and the IPCC Special Report on Global Warming 2018 conclude that we need to limit global warming to 1.5C to avoid the worst effects of climate change and to do this human caused emissions of CO2 need to reach zero by 2050. The way to do this is to convert our energy production from fossil fuels to clean energy like solar, wind, hydro, geothermal etc. So with this Avista IRP which will extend from 2020 to 2045 it is absolutely essential to plan on achieving 100% clean energy. We will not have another chance. One of the effects of climate change here in the Moscow Idaho area I have really noticed is forest fire smoke from mid-late summer. We know that fire season is greatly extended and the severity of fires has greatly increased, this has resulted in real smoke problems in our region. Both of my kids in the last 10 years were on youth soccer teams with frequent practice"

Comment: "Idaho customers must see Avista move from fossil fuels to Green Energy sources. Climate change is killing us with forest fires, destroying whole ecosystems. The only way forward is green energy and Idaho customers demand that Avista give us the same support to use Green Energy that Washington State gets. Climate crisis is upon us, we all must act to support Green Energy now."

Comment: "Please promote alternative energy options for residents of Idaho by providing incentives. Many other states provide incentives to get residents to convert to solar (or wind) energy. Our state should be proactive to promote small users to install PV panels with a buy back model that promotes alternative energy. "

Comment: "Thank you for the opportunity to comment on Avista's 2020 Integrated Resource Plan to meet customer load over the next 25 years at least cost while considering risk. I have been a satisfied Avista/Washington Water Power customer since the 1980s. I am encouraged by the company's goals of becoming carbon neutral by 2027 and providing 100% clean energy by 2045, but I'd like to see the transition happen faster. My primary concern is climate change—its effects on my own community and ones around the world and the urgency of addressing it promptly to avoid its most devastating consequences. A mild asthma sufferer, I approach this point in our glorious northern Idaho summers

with some trepidation because it means fire season is near. Climate change is expected to make our summers even longer and hotter, with increasing wildfire frequency and size and more smoke. I'd like to see Avista get out of carbon-intensive electrical generation from coal on a faster timetable, replacing it with clea"

Name of Utility Company: Falls Water Company

Case ID: FLS-W-20-03

Comment: "We received a letter from Falls Water that they have applied for a rate increase. In the area that I live, our rates fall under the category of a 23.8% increase. Considering that we have no other options for water— we can't compare prices and go with a company that offers a lower rate, as well as the fact that we are all experiencing a pandemic which is affecting all of us in one way or another, a significant increase like that seems astronomical, and unacceptable. I know that Falls Water has some of the lowest rates in the area, but believe that the increase being applied for is too steep. I believe a more acceptable rate increase would possibly be more in the range of half of what is being applied for. I hope that my thoughts and concerns are considered in the decision made."
