)	ORDER NO. 35758

On April 12, 2023, Commission Staff applied for an order updating inputs to the surrogate avoided resource method (“SAR Method”) model, making administrative changes to the SAR Method model, and approving the SAR Method avoided cost rates for eligible qualifying facilities (“QFs”). Under the Public Utility Regulatory Policies Act of 1978, the Commission calculates published avoided cost rates for eligible QFs using the SAR Method for all three major public electric utilities in Idaho: Avista, Idaho Power, and Rocky Mountain Power (collectively, “the Utilities”). Staff requested an effective date of June 1, 2023.

The Commission now sets deadlines for interested persons to comment on the Application, and for Commission Staff to reply.

BACKGROUND

The SAR Method calculates avoided cost rates for QFs that are under the applicable resource type project eligibility cap, using a Combined Cycle Combustion Turbine plant as a surrogate. Each year, the Commission updates the natural gas forecast used in the model and the updated rates are available to eligible QFs beginning June 1. *See* Order Nos. 32697 and 32802.

NOTICE OF APPLICATION

YOU ARE HEREBY NOTIFIED that Staff updated the natural gas forecast in the SAR Method model, using the “reference case” natural gas price forecast for the Mountain Region’s Electric Power sector included in the Energy Information Administration (“EIA”) Annual Energy Outlook 2023 released on March 16, 2023.

YOU ARE FURTHER NOTIFIED that a copy of the relevant natural gas price forecast is included on the AEO2023-EnergyPricesMountain tab in the SAR Method model which is attached to the Application.
