Name of Utility Company: Idaho Power

Comment: The Public Utilities Commission should reject Idaho Power's proposal to adversely affect residential solar power generation by giving them a new rate class that penalizes innovative, sustainability practice and even helps charge the power grid system.

By individual consumers powering their own energy through on-site power generation and even paying power wattage back into the power grid, they are demonstrating innovation, sustainability, and a commitment to a cleaner and more sustainable future for all Idaho citizens at a time when less reliable power sources are affecting every Idahoan as well as its wildlife. Their practice positively affects all other consumers and although it may not always positively affect Idaho Power, as a public utility, their bottom line should not be placed above that of the customers they are contracted to provide service to.

The time is now to improve our renewable power grid and if anything incentivize renewable resource generation. Idaho Power's proposal is a step backward from the necessary steps Idaho, our nation, and the world need to take towards energy independence and a world where one person's consumption is not negatively affecting another person's quality of life. The disastrous effects of pollution are still being measured and fully quantified in real terms. However, the world is only now beginning to realize just how disparate our current consumption is from the sustainable levels we need to sustain a world population that exceeds 7 billion people. I know I do not need to tell the Public Utilities Commission just how important long range planning and implementation is to ensure a successful and healthy future for the generations that will follow us in terms of our natural resources and energy outputs. Idaho is growing and so too must our vision for Idaho's Power generation and consumption.

Please ensure these considerations come first when assessing the impacts of such a narrow minded and shortsighted proposal and outright reject this infringement on a free Idahoans right to produce and use their own, free energy produced by the sun, an investment made privately for mutual public and private long term rewards. At least, require Idaho Power to provide better justification than their own profit capacity. They serve every Idahoan as a public utility under contract, not the other way around.

Sincerely,

Joseph Schueler
