Comment: Thank you for the opportunity to comment. Please deny Idaho Power's request for new schedules for residential and small general service customers with on-site generation. I oppose changes to net metering because on-site generation should be encouraged, not discouraged. We need to reduce our use of fossil fuels for generating electricity, since this practice is causing climate change. As an Idaho Power customer without on-site generation, I prefer to receive electricity produced by my neighbors with solar panels, not from a coal-powered source in another state. Please reject the requested changes to net metering.

Comment: Dear Idaho PUC Commissioners

I am against charging more for home owners with solar (changing the net metering system).

Clean energy is important for our future. A few examples, it reduces air pollution and health care costs.

We need to keep home solar affordable for middle-class homeowners. This helps energy to be more innovated and reduce dependence on coal.

I want you to look at more smart-grid technologies to avoid power outages, embrace distributed energy, expand solar in Idaho's future.

Do not stay in the past, look to the future and help Idaho grow clean and solar.

Comment: Regarding the hearing for March 1 - I do not support a change in rate for solar net metering customers. Please, Idaho Power, lead the way for new models of generating power, supporting customers, localizing energy production, and rate determination.

Thank you
