Name of Utility Company: Idaho Power

Comment: Idaho Power says it wants to promote Green Energy. They send information in each bill describing how they are trying to achieve a greener future for the Treasure Valley.

By getting rid of Net metering, they discount the benefit that individual and private corporation funded arrays provide to the grid during peak demand periods.

It seems they only want to OWN the green power.

They support renewable power only they can charge for it.

Net Metering empowers all of us to make our own contributions and help make the Treasure Valley a lovely place to live.

Please keep Net Metering. Thank you.

Comment: We oppose Idaho Power's attempt to reduce the rate it credits net metering customers. How does this make sense when Idaho Power wants to generate 100% green energy by 2045? Reducing the rate of credit will impede this goal. Why should net metering customers be treated differently when they are improving power generation that helps ALL consumers and Idaho Power's financials? We invested \$30,000 on our home solar system with the expectation that this will be paid off in 15 years when present net metering rates are factored in. Our decision to go solar was based in part on this assessment. IP now wants to change the rules on us, which is unfair. I am not opposed to paying fixed fees to support the IP's infrastructure, but we sacrificed considerably in order to generate solar. Finally, solar power is a growing economic engine in Idaho and changing these rates will benefit outside investors while negatively impact local businesses.
