Name of Utility Company: Idaho Power

Comment: Thank you for providing this opportunity to comment on Idaho Power's application to study net excess energy from customer on site generation. I believe it is critically important to encourage generation of renewable energy in particular to give the freedom and opportunity to people who would like to install rooftop solar on their homes to generate electricity from the energy of the sun! I also believe it is important to keep the electricity grid maintained in excellent shape to avoid any fire or transmission problems. I would hope that the IPUC can come to a fair conclusion to allow both of these things to occur that benefits both the individual generating onsite energy and the power companies.
