Comment: I am flabbergasted to learn that Idaho Power is asking the PUC for a 50% reduction to the value of the credit I receive on my bill for excess power generated by my roof top solar panels. This will greatly reduce the value of my investment. It is unfair to those who purchased their systems with the understanding that they would receive credit at the market rate.

Comment: I am a solar business owner:

1. This settlement will destroy solar in Idaho and will force us to stop investing in Idaho Power territory by eliminating 1:1 net metering
2. Not grandfathering existing customers into 1:1 net metering is unfair to those who invested in solar under the pretense of receiving 1:1 net metering

Comment: The solar industry is the future I am very excited to be a part of. The changes Idaho power are planning to make will put me out of work along with all of my co-workers. I also planned to install solar panels on my own home as an investment, saving, and also to do my part in helping the environment. The changes from Idaho power will also prevent me from installing my panels and restricts me from helping the environment in the ways I once could.

Comment: If this proposal is approved, it will affect rates of Idaho Power solar customers. Although the rates won't directly affect the utility rates I personally pay as a Rocky Mountain Power Customer, I believe it will still have a great effect on me and my family. Working at a solar company, a dramatic change like this would inevitably influence the vitality and momentum of the solar industry, directly impacting the stability of my employment. As the sole income generator in my home, I take this very seriously.

Change in the conversion of solar credits, will reduce the financial return on the investment of solar. A large portion of the areas we service will be affected by this credit alteration, thus causing entire areas--those serviced by Idaho Power--to reap fewer benefits from the switch to solar energy.

By truncating the industry in this way, this proposal inhibits company growth and places an unanticipated cap on our ability to help our neighbors enjoy better living and greater savings.

I feel that this move toward altering the credit conversion is heavily motivated by the utility company's fear of losing customers to what I believe is a much more eco-friendly and stable form of energy. It seems unjustified to penalize those who choose to move toward energy independence, greater financial savings, and environmental stewardship.

I expect that this proposal be heavily revised, if not rejected, for the sake of Idaho Power Customers, myself and my co-workers.

Name of Utility Company: Idaho Power

Comment: I oppose the proposed settlement with the rate changes for solar customers and demand that they be grandfathered into 1:1 net metering. This is going to be affecting customers I have sold and set up, my future customers and most importantly my job. I recently was promoted to be the branch manager for Pocatello and things were just starting to get good. Now we have to travel all the way up into Rocky Mountain Power area in order to sit with customers that we know the future of net metering. I don't know what the future of my branch will be with the aggressive email that is being sent to all customers and I've worked incredibly hard to get here, and so this will affect my life and my livelihood extensively. Please do not allow this greedy measure to pass.

Pocatello Idaho, 83201

Name of Utility Company: Idaho Power

Comment: I made the decision to go solar based on the current net metering rules. this change without notice does not take this into consideration. Please review the situation at least for existing customers that made decisions based on different information. 1:1 net metering for existing customers for at least a period of 10 years would be adequate and in line with what other utilities have done when there have been changes to Net metering.

Name of Utility Company: Idaho Power

Comment: I am a current residential power generator and I understand that the power I generate from my solar panels goes on to the power grid and I am under the Net Zero program with Idaho Power.

My concern is with the new rate changes for reimbursement from a Net Zero to a return of 8.7 cents/kilowatt hour down to 4.4 cents/kilowatt hour will not continue my Net Zero. When I say Net Zero I am still paying a \$5.20/month connection fee to be connected to the grid.

Here are my concerns:

- 1) Will the current customers on the Net Zero program with Idaho Power have a permanent grandfather clause so that no rate changes occur?
- 2) I bought my solar panels to have a fixed cost for electricity as I am nearing retirement and will have a fixed budget. How does Idaho Power propose that I can budget or plan for retirement if I have to worry about ever increasing costs when my retirement income will be fixed?

What I do not see from Idaho Power other than another rate hike is information specifically showing why my free power to Idaho Power cannot be kept at the current Net Zero rate:

- 1) The power generation helps offset Idaho Power's purchase of power during peak hours specifically during the summer when air-conditioners are running.
- 2) If more people elect to place solar on their houses what are the net affects? i.e. cost of Idaho Power not having to building more generation plants or buying power from the open market.
- 3) If there is too much power on the grid because of the individual generation why is it that Idaho Power cannot sell this excess on the open market? I am pretty sure Idaho Power can predict any excess power generation based on the current weather conditions.
- 4) Why doesn't Idaho Power create power storage facilities if there is excess power generation? I would imagine this would have less environmental impact than building power generating facilities. What are these costs compared to building power generating facilities? What is the true fixed costs of the power grid.
- 5) Idaho Power should encourage individual power generation because solar and wind are green sources and are bought and maintained by the individual homeowner (no expense to Idaho Power for either the power generation equipment or the electricity generated).

Any feedback and schedules for meetings on this issue within Canyon County would be greatly appreciated.

Thank you -

Gene Foster

Comment: The 1 to 1 changes in the settlement that Idaho Power is proposing will greatly affect my job. I work for a solar panel company called Horizonpwr and we have many customers that receive their power from Idaho Power. Allowing these changes to take place will greatly limit the value and benefits of going solar in many areas. I ask that you do everything you can to prevent these changes from happening.

Name of Utility Company: Idaho Power

Comment: I had a solar power electricity generating system installed on my home and it began operation in March, 2019. I paid for the system and its' installation in cash, at the cost of approximately \$27,000.

If I understand the letter I recently received from Idaho Power (concerning a settlement agreement regarding changes to the compensation schedule for residential and small general service contractors who generate power on their own site) the proposal might result in the compensation I currently receive for on-site generated power being more than halved ultimately. If I had known such a settlement was pending I would have objected to it in the strongest terms. I was unaware that such talks were underway and that an understanding of my expectations was subject to a negative change. I write you now to ask you to consider that such a compensation settlement is the equivalent of unlawful seizure of financial gain reasonably anticipated by an Idaho Power customer.

If some form of grandfather arrangement is possible to shield me from the losses I would suffer under the settlement agreement I strongly urge that a customer like me be grandfathered so that the promised agreement of solar powered electricity sent to Idaho Power be remunerated at the full retail cost level.

I am willing to share my concerns directly if some manner of communication between members of the IPUC and myself can be put in place.
