IDAHO PUBLIC  
UTILITIES COMMISSION

Re: Idaho Power Settlement  
Case Number: IPC-E-18-15

Commissioners:

This letter has nothing to do with the issues of this matter that is currently under your consideration.

It is about the effective date of your decision.

Please refer to the two enclosed monthly bar graphs that give you a visual record of the actual solar kWh produced by my solar installation in 2018 and 2019.

They clearly show the winter seasonal months of November, December, January and February are and will be net energy import months.

You know the conceptual intent of residential solar generation from the very first has been a net zero electrical cost on an annual basis. If the start of whatever new rate plan you approve is January 1, every citizen in the state of Idaho with a solar installation will experience, under the current policy, a net unrefundable energy import charge for January and February.

Solution: I urge you to consider a start date of March 1.

Sincerely,

William Allen Freeman
