Address: 1630 Heroic Road
Hailey ID, 83333

Name of Utility Company: Ms.

Comment: I am commenting on these cases in favor and support of homeowners and family farms to install solar to add clean renewable energy to Idaho Powers grid. This is in line with your own goals of 100 renewable clean energy by 2045. It is also in line with the state of our planet and the climate crisis we are facing. The science is clear, we must decarbonize our power grid, close coal, reduce our dependence on natural gas and build solar, wind and geothermal power plants to electrify our grid. We should shut down coal fired plants now and Idaho Power must come up with a schedule to shut coal plants. We should follow the lead in Utah with Rocky Mountain Power and agree to an even bolder goal of 100% net renewable by 2030 and follow the IPCC science report. We are running out of time and must active boldly now! Be a leader, commit to 100% renewable and build solar. wind and geothermal to scale and get ratepayers off coal and natural gas. The time is now! Thank you for choosing leadership in a clean energy future we must do this to protect the planet for future generations.
