Dear Idaho Public Utilities Commission:

I am an Idaho Power customer and I support clean energy because ... I love Idaho's blue skies, Idaho is ripe for new jobs in the clean energy sector. Investing in clean energy will help not only our resources but our economy as well

Dear Idaho Public Utilities Commission:

I am an Idaho Power customer and I support clean energy because climate change is destructive to our snow pack, our trees, will encourage more wildfires, will be the cause of more drought and challenge our farmers. Please continue to accelerate the pace of divesting from fossil fuels. A clean grid by 2035 is a worthy goal as I would like to see it in my lifetime. With a clean grid, we can move more appliances, cars, buses, heating systems onto the grid. Thank you.

Dear Idaho Public Utilities Commission:

I am an Idaho Power (IP) customer and Conservative and I support clean energy. I urge IP to commit to only using clean renewable energy sources, and to examine and adjust its practices and policies to ensure that they are environmentally friendly and responsible. Let's get off fossil fuels and move proudly ahead knowing that we have a sustainable future.

Dear Idaho Public Utilities Commission:

Hello,

I am an Idaho Power customer and I support clean energy. Climate change continues to be a huge concern. Drought, catastrophic wildfires and mega-storms threaten our health, safety, and food production.

Idaho Power is moving in the right direction, but not fast enough. Shifting from coal to gas is a waste of money. We need investment in renewable energy and clean energy jobs. And we need to encourage home-based power generation via rooftop solar and wind.

Idaho Power's shrinking compensation to customers who GIVE power to the grid during peak load times is a slap in the face for those of us who have invested significant money in their home-based systems. Our family is working hard to pay off a large loan on our solar system, and Idaho Power should be appreciative of our willingness to bolster their grid out of our pockets.

Thank you,

Heather Steele

Dear Idaho Public Utilities Commission:

I am an Idaho Power customer and I support clean energy because I care about climate change. I believe clean energy will be good for the economy and save money for the people of Idaho while it will also be a long term solution to our changing climate. Clean energy will improve our air, our pocket books, our planets future. We need to move quickly to clean, local sources for energy. No more fossil fuels!

Dear Idaho Public Utilities Commission:

I am an Idaho Power customer and I support clean energy because I want a strong economy. Reduction of climate change would benefit future generation. Clean energy allows Idaho to be exclusive in providing customers power from state companies.

Dear Idaho Public Utilities Commission:

I am an Idaho Power customer and I support clean energy because it is the future while fossil fuels are adding to the climate crisis. Clean energy is cost competitive with fossil fuels. By moving to more clean energy will not cause cost increases for customers like me. I'm pleased that IPC is getting out of coal fired plants and urge you to get out of gas fired plants.

Dear Idaho Public Utilities Commission:

I am an Idaho Power Company (IPCo) customer and I support clean energy.

Given the current market, I think IPCo can do a better and faster job transitioning not only away from coal power but away from fossil fuels in general. With a more open and supportive consumer solar policy (net metering) and an open call for distributed energy resources (DERs) IPCo could drive renewable development within Idaho with both wind and solar. There could be partnerships forged to integrate batteries into the grid on residential, commercial, industrial, and utility-scale levels. This would benefit all by providing regular, deployable, and distributed energy throughout the state.

There is so much potential for renewable energy sources in Idaho it would be a shame not to take this opportunity to utilize them fully, and in a manner that stimulates job creation at the same time. Wind/solar/battery project construction requires short and long-term skilled positions, which would help bring Idaho's labor force into the 21st century as well as help raise the paycheck average from the abysmal national average of number 43 of 52 (including DC and PR). Idaho is not alone in needing an economic recovery, and this could be a lasting vehicle for that recovery - potentially even turning Idaho into a net exporter of energy to other markets.

Economics is driving a shift to renewables world-wide, with an added benefit of renewable energies helping contribute to cleaner air, which all of us in Idaho enjoy. Let's keep it that way, and make Idaho even greener than ever.

Thank you for your time.
