Comment: "I believe the plans to change the net metering compensation program for future and current Agricultural and commercial solar energy customers are detrimental to the move to alternative energy sources. Rate changes that can be proposed at any time cause uncertainty in determining the feasibility of a financial investment in solar for farmers and/or businesses as it is a long term investment. That being said, change is part of nature. But, changes should be minimized and there should be some minimum rate guarantee on the amount that will be received."
