Dear Commission Secretary PUC,

Solar is an important player in Idaho's clean energy future! And customer-owned energy production benefits the community by strengthening local grids instead of relying on long-distance power lines. We must work together to ensure local, clean, customer-owned power is an option for all Idahoans.

Regards,
Karen Armstrong

Dear Commission Secretary PUC,

As a home solar user, I am urging you to pursue a solar study that fairly values home and business solar systems and ownership. There is no reason why homeowners and business owners should be punished for creating community energy systems. They should be incentivized and be credited with the same rate that they would normally be credited. Customer-owned energy production benefits the community by strengthening local grids instead of relying on long-distance power lines. More solar power means cleaner air by displacing polluting coal and gas. Local power keeps money in our community and grows the economy while we help Idaho Power achieve its 100% clean energy goal.

Solar is an important player in Idaho's clean energy future! We must work together to ensure local, clean, customer-owned power is an option for all Idahoans.

Thank you.

Regards,
Alex Hackett

Dear Commission Secretary PUC,

Solar studies must accurately value the benefits of local clean energy production. Local, clean energy benefits us all and plays an important role in working towards a clean energy future. When issues arise in times of heavy demand for electricity, rooftop solar panels can fill some of the increased demand.

Dear Commission Secretary PUC,

It is important that in any solar studies you do, you include consideration of the benefits we all receive from individual households installing renewable energy that can feed back into the grid. True net metering is essential.

Local, clean energy benefits us all and plays an important role in moving us toward a more resilient, clean energy supply in the future.

Thank you for your work on this.

Dear Commission Secretary PUC,

Solar power studies must accurately value the benefits of local clean energy production. Local, clean energy benefits us all and plays an important role in working towards a clean energy future. As a person who has installed solar panels on both house and van, not for purposes of saving money but for helping reduce my family's carbon footprint, I understand the value of solar power to a community. Solar power can add substantially to our energy independence while lowering Idaho's carbon emissions. Why would we not provide incentives for everyone to do this ? Why would we not truly study the benefits to our community and the world , rather than just focus on short-term impacts to the bottom line of our power companies? With so much sun (ie. Solar power) , why would Idaho not grasp this amazing opportunity?
Thank you fir your time and consideration.

Regards,
Renée Mullen

Comment: "Please include me in any invitations for the public workshops. I see in the September 17, 2021 Decision Memorandum that the commission staff will file a "framework to study" on September 30, 2021. Will the filing be available to the public on the PUC Case Summary web page? If not, how can I review it prior to the public workshops? Has/will Idaho power submitted a similar filing and will it also be available? Will the study look at the net metering adopted by other locations as models (e.g. Logan Utah "Net Metering without a Fight" and many others)? The actual experience in other locales can inform the study of important considerations and consequences to the program and changes. Looking at and comparing solar payback period and other key metrics in other locations should help make sure that Idaho does not discourage residential solar adoption in the future with its rate changes. I would also like to see the study include the affect of the Dec 20, 2019 end of grandfathered rates on solar installations in Idaho? Has the result has been "chilling the market" as predicted by solar advocates? What are the impacts (environmental, economic, ...) of this action given new rates are not expected until 2023? Should the PUC extend the grandfathering date to encourage solar adoption in the interim? "
