Name of Utility Company: Idaho Power

Case ID: IPC-E-22-22

Comment: "Dear Commissioners, I just had solar installed on my roof a few weeks ago and I was displeas hearing the news that Idaho Power is trying to take away the 1-for-1 credit on home generation systems. After doing some research, I have found that there are multiple websites that site multiple studies showing the benefits to the environment, Utility and costumers from home solar generation systems. A perfect example is a study Pacific Northwest nation Laboratory did in 2018. In the study, a tool was developed by comparing multiple states compensation structures. This in turn showed the affect of home solar generation on the utility. I think it would be in the publics best interest to have an independent company like Pacific Northwest National Laboratory do a comprehensive study because this decision will drastically affect people that have solar and the ones that wish to get solar in the future. Based on information provided from Solar Energy Industries Association, Nevada Energy did a similar credit reduction and home solar generation permits decrease by 92% in 2016. Changing the 1-for-1 credit structure will only benefit Idaho Power and deter home owns from generating their own power."

Dear Commissioners Anderson, Chatburn and Hammond,

I am writing to request that you reject Idaho Power's recent rooftop solar study until it is reviewed by a third party and includes a *long term* cost benefit analysis.

The study should include figures indicating the long term costs to Idaho residents if energy related emissions and biodiversity loss continue, without highly incentivized solar initiatives. We are already looking at extreme long term market volatility as hydroelectric power becomes less reliable, and increasing public health costs as emissions from fossil fuel generated electricity harm residents.

Idaho Power's profit structure should not dictate decisions impacting the future public and environmental health of Idahoans.

Sincerely,
Hannah Harris

Comment: "Dear Commissioners, We are in a Climate Crisis and Idaho Power should be at the forefront of meeting this challenge. Instead, they seem to be doing everything they can to discourage rooftop solar power! You are in a position to change the way they are handling this important part of the solution. Please step up to the plate and meet this responsibility seriously, for the sake of all of us. Thank you, Sue Petersen"
