Subject: Idaho Power Solar Study (IPC-E-22-22) Scheduling
Date: Friday, August 12, 2022 3:19:00 PM

We are Idaho Power customers. Although we don't fully understand decisions being made in regards to the above solar study, we understand enough to realize that Idaho Power appears to feel threatened by the competition of solar alternatives. My husband and I do not have solar power at our home and are not planning to change that because of the substantial cost, but we do realize the need for people to have other options as our world reduces it's reliance on oil and gas. It's been indicated that electricity won't be able to handle the additional demand.

Any attempts to hinder the development, sales, or growth of the solar market needs to be clearly explained to and understood by Idaho Power consumers. Therefore we are joining those who are requesting public hearings.

Thank you,

Debra and Steve Browning
Meridian, ID

Telephone: 541-915-6109
Address: 11469 Payette Heights Road
Payette, ID 83661

Name of Utility Company: Idaho Power

Case ID: IPC-E-22-22

Comment: "My name is Robert Kelley. I'm an Idaho Power customer living near Payette and have a rooftop solar system on my farm equipment shed. I served on an electric utility Board of Directors for over nine years and am familiar with the rate setting process. I am very concerned about Idaho Power's recently published cost-benefit study on rooftop solar. It underestimates the value of solar by intentionally excluding measurable system benefits. This threatens fair compensation for Idaho families, businesses, farms, schools, and other entities that benefit from distributed solar generation. I am concerned that current and future solar owners will be unfairly compensated and this will discourage the installation of customer generation. I believe the public needs to have a voice in the PUC's consideration of Idaho Power's rooftop solar study. Please hold in-person public hearings in multiple locations across Idaho Power's service territory. And, offer virtual video options and a weekend option to make this critical proceeding accessible to as many people as possible so they can share their concerns directly with the Commission. Thank you for your consideration."

Comment: "Hi. My names is James Flynn. I moved to Caldwell from my previous home in Southern California. When I retired from the Sheriff's Department in December of 2015 and was hoping to immediately move up to Idaho. That is because my brother and his extended family had, at that time, lived up her for many years. And during my visits I found that I loved the Idaho culture, it was much different than the culture in California. However, due to a diagnosis of cancer I decided to stay in California with the doctors I knew until the cancer was in remission. And I finally moved up here in December, 2020 and have been an Idaho Power customer ever since. And, over the years (I grew up in California), the California governmental and quasi-governmental (governmental regulated) agencies have become bloated and, I believe, less responsive to the people they are paid to serve. I hope I am wrong but, just in the short time I have lived in Idaho, I am concerned that Idaho may be starting to go the same direction. According to your website, your goal is the "clean" generation of electrical power by 2045 I believe. As I understand, the residential solar net metering structure is very important in helping to meet that goal. Therefore, I hope you will continue to support residential power generation, through solar panels, to help yourselves and all of us meet that 2045 goal."

Subject: IPC-E-22-22 Public Hearing Request
Date: Friday, August 12, 2022 11:55:32 PM

Dear Idaho Public Utilities Commission,

Listen to us! Hold public hearings on Local Solar Power!!

I am very concerned about Idaho Power's newly published cost-benefit study on rooftop solar. It underestimates the value of solar by intentionally excluding measurable environmental and related benefits. This impacts customer rates and threatens fair compensation for Idaho families, businesses, farms, schools, and other local entities that benefit from locally-owned solar.

Please hold in-person public hearings in multiple locations across Idaho Power's service territory (and offer virtual video options and a weekend option) to ensure as many people as possible can participate in this critical proceeding and share their concerns directly with the Commission.

After gaining an understanding of public concerns and the technical flaws in the study, I urge you to reject Idaho Power's study. Idahoans deserve solar rates based on a more fair, credible, comprehensive, and complete analysis.

Sincerely,

Jody Mahnken

Comment: "I would like to request a public hearing to understand Idaho Power's intent and future impact on customers producing energy via home solar installations. The current study indicates that Idaho Power would reduce the current fair purchase rate of home-based solar generation substantially, thereby defeating the incentive for homeowners to convert to this form of renewable energy. The study does not adequately address the benefits of a distributed, clean solar energy system created by home-based solar. I encourage the commission to solicit more input from the public and from current (and potential) home-based renewable energy producers."

Subject: IPC-E-22-22 Public Hearing Request
Date: Saturday, August 13, 2022 8:46:06 AM

Dear Idaho Public Utilities Commission,

This issue goes beyond ID Power, it is also a state issue. When I personally installed rooftop solar on my home, Idaho DBS made it super difficult during the permitting process, a Jimmy Stansel was a major roadblock. Solar installers know who this person is and do not have a positive opinion of him. Hopefully he is no longer involved in solar permitting.

ID Power also needs to step up and help keep solar affordable, how else are we to transition to cleaner energy??
Thanks for your time.

I am very concerned about Idaho Power's newly published cost-benefit study on rooftop solar. It underestimates the value of solar by intentionally excluding measurable environmental and related benefits. Comment: "Hello IPUC, Idaho power attempt to add unreasonable calculated avoided cost to "buy" small home onsite generation solar at a quarter to less than half of wholesale market rate is an attempt by a monopoly to keep their stake in the production market. As Professional civil engineer for the Bureau Reclamation, one of the largest publicly funded power producing entities in the West, I see it ridiculous that power company can lump all these "avoided cost" to target producers that make less than 0.05 percent of the entire production. It is akin to Idaho drivers blaming bicyclist commuters on small neighborhood roads (who make up less than 3 percent of the entire transportation) for congestion on the major highways and interstate. While I completely familiar with and understand the infrastructure cost of maintaining high voltage transformers, power lines, and other power related cost like powerplants, blaming small 7kwh roof top solar production, is pennies in the grand scheme of production cost. You can not saddle every cost on one type of generation. As an engineer who inspects federal hydro electric facilities along the Snake and Columbia rivers, I find it comical that Idaho Power and Idaho Legislatures are going after the smallest generation, when Bonneville Power Administration markets there hydro production at low cost for the complete benefit of the public. This publicly traded power is the power (primarily from the Corp of Engineers and Grand Coluee Dam) that Idaho Power generally buys on the market that is shared across many times federally (WAPA, BPA) power lines. The small solar guy living in the Treasure Valley is not generating enough to even leave there neighborhood, so they negate the high level transmission "avoided cost". This study is completely flawed is only an attempt to reduce solar generation at the benefit of Idaho Power market. It's the same reason there is on-site generation caps of 25 kwh was created by the Idaho Public Utilities Commission and state government to prevent any further small power development by small companies in rural locations throughout southern idaho. IN A TIME when HVAC systems and electric cars are being installed and increasing demand, and Idaho Power risk not meeting peak demand at the highest loads in summer, I find it foolish to cap and reduce small generation. This study is a failure of sound engineering judicious for political and monetary gains and fails to look at the larger issue of overall generation capacity throughout the state and grid diversity. Idaho Power "goal" to "provide 100% clean energy by 2045 builds on its long history as a clean-energy leader that provides reliable service at affordable prices" is ludicrous if they are to chop and gut the entire market of small capacity generation by only selling (via credits) the power back to its customers at 2-3 cents per kwh is a larger market force than 'clean power'. Please reject

this study that looks to put the entire market on the backs of the smallest energy generation. Ultimately Idaho Power attempt to reduce on-site solar generation will ultimately reduce overall production in areas like the treasure valley and raise our lowest rates in the country as demand continues to grow. Respectfully, Nathan Morgan, P.E."

Comment: "I have been an on-site customer-generator using solar power for 3 months. Because of this, I have dramatically reduced my carbon footprint. I read the VODER Study and believe that it is flawed in many ways. I feel that it's conclusions are misleading and could lead to a negative impact on both customer-generators and the solar power industry in general. I strongly support the need for accessible in-person public hearings on this issue. Let's do what is right for Idaho and assure that customer-generating is treated fairly by Idaho Power. "

Dear Idaho Public Utilities Commission,

We need local and accessible public hearings on the proposed changes to individual homeowners' credits for generating solar power. People install rooftop solar at considerable personal expense because everyone wants to do their part to reduce dependency on fossil fuels. Idaho Power should be partnering with motivated homeowners to improve the future of power generation here in Idaho for our children and their children. after them. Change always takes effort and of course, causes inconvenience while we find a better way. Let's all help one another pave the way to a better future. Thank you!

I am very concerned about Idaho Power's newly published cost-benefit study on rooftop solar. It underestimates the value of solar by intentionally excluding measurable environmental and related benefits. This impacts customer rates and threatens fair compensation for Idaho families, businesses, farms, schools, and other local entities that benefit from locally-owned solar.

Dear Idaho Public Utilities Commission,

Idaho Power's study is not fair or credible and that it presents an artificially low value of solar that will prevent residents from exercising their right to energy independence.

Slashing compensation rates to local solar owners by over 60%, making solar power less affordable for Idaho families, businesses, farms, schools, this is not promoting clean energy for our state.

But first things first: we need equitable and accessible public hearings in multiple locations and days (including a weekend option)! Local residents in Pocatello, Ketchum, Twin Falls, McCall, or even Ontario shouldn't have to drive all the way to Boise to participate in a public hearing on such an important case.

I am very concerned about Idaho Power's newly published cost-benefit study on rooftop solar. It underestimates the value of solar by intentionally excluding measurable environmental and related benefits. This impacts customer rates and threatens fair compensation for Idaho families, businesses, farms, schools, and other local entities that benefit from locally-owned solar.

Comment: "Idaho Power routinely asks people to turn off their AC during peak hours, and has a program where they can do it for you, as well. They also have a time of day plan. So Idaho Power knows about peak hours loads, and prices accordingly. This means that they know the benefit of solar power adding back into the grid. It's pretty disingenuous for them to move towards a model that doesn't allow consumers to reap the benefit of adding to the grid. Any rule that effectively removes or swallows all the benefit of net metering simply creates a monopoly. And that's not good for consumers, whether we have solar or not. Net metering should be left in place. And Idaho Power should not be able to charge fees or anything that would significantly curb solar or wind. Thank you Jeff Taylor"

Case ID: IPC-E-22-22

Comment: "How does Idaho power continue to incentivize home owners to buy solar panels with this current study? It seems that after June 2023, there would be zero monetary incentive to put solar panels on a residential dwelling as the buy back costs for the investment will never be realized. I think the rate at which Idaho Power purchases solar kilowatts Crome homeowners should factor in some percentage to reflect the continuing incentive to move to green power sources. "

Comment: "I am worried that this current study study from Idaho power will disincentivize customers from investing in Solar for their homes"

Comment: "I wish I had never spent the money to install solar panels. I feel more foolish every day as I consider the reduction in compensation for the electricity generated by the solar panels I installed at no cost to Idaho Power. The \$5.00 charge I pay every month and will continue to pay for the rest of my life should be more than enough to cover the cost of transmission lines and service personnel. You might be able to take advantage of the customers like me who installed solar panels, but when the demand exceeds your capacity because no one is willing to invest in a losing proposition (which is what solar panels will be) you will have yourselves to blame."

Comment: "I have heard through social media that Idaho Power wants to decrease compensation for homeowners who have solar. If this is the case, there needs to be a public hearing. In the setting of climate change and the increased need to convert to green energy, we should not be penalizing citizens who invest in green energy. On the contrary, this needs to be encouraged for the betterment of all. To decrease the incentive to invest in solar goes against everything we should be working toward. Respectfully, Mike Morris "

Comment: "We want to REQUEST A PUBLIC HEARING ABOUT case number "IPC-E-22-22";. Please leave the credit system the way it is. We are not interested in cash payouts, which might not be very fair to solar homeowners. thank you"

Comment: "We have enjoyed rooftop solar and the credits for the last several years. We understand that the power company now wishes to pay for the extra power they get from us instead of giving us the credits. The credits are much more valuable than the proposed payments--we should be encouraging solar power--not discouraging it!!! "

Comment: "I'm very concerned that idaho power is not letting the public have a public forum/discussion to talk about solar impact and usage in idaho . I am concerned they are biased against businesses and residential customers who have solar and contribute power to our state. The economic impact is significant and I would like to know there is more consideration for everything involved with how we solar contributors impact t idaho power and the green direction for clean power we should all be striving for. "

Comment: "I am urging the IPUC to hold public hearings regarding the ANY and ALL changes to Idaho Power's solar cost sharing/benefit program. The logic Idaho Power used in its study and resulting program changes appears to be flawed. Since Idaho customers do not have the option to change power companies, it is the IPUC duty to allow public hearings on such a monumental decision. Thank you, Carolyn "

Comment: "As one who invested in on-site power generation and given the monopoly Idaho Power enjoys I have no alternative but to sell excess power to Idaho Power. The excess power I sell should be purchased at the same rate I purchase from Idaho Power. By my investment in power generation I've enabled Idaho Power to avoid additional power generation investments and leverage a "green" source of power. If Idaho Power prioritized its customer's interests first it would provide an incentive for more customers to invest. Think of all the available roofs within Idaho Power's service area that could be generating power, every day. It would wonderful if case IPC-E-22-22 could be summarized, in plain english, without industry jargon, so that those who are not public utility experts can understand the intent of the study, its findings, recommendations and outcomes. There are more TLA's used than I've encountered any where. Thank you"
