Address: 4374 Sage Creek Drive
Boise, ID 83714

Name of Utility Company: Idaho Power

Case ID: IPC-E-22-22

Comment: "I agree with the assessment by the Sierra Club. I feel that Idaho Power's study is disingenuous. The study fails to include the cost of avoided carbon emissions, which then falsely justifies a much lower rate for energy that would be exported from customers with rooftop generation. Existing households should AUTOMATICALLY be grandfathered into the existing rate system, as the cost-basis analysis at the time of installation must remain intact--otherwise, households become victims of a "bait-and-switch" policy. Given the enormous hit to the country's electric grid from loss of generating capacity from Lake Mead & Lake Powell, Idaho Power should be supporting independent power generation, not trying to squash it. "
