Boise, ID 83706

Name of Utility Company: Idaho Power

Case ID: IPC-E-22-22

Comment: "These are my comments on changing the current Idaho Power VODER Study: We purchased solar panels a year ago to help our environment and to do our part about Global Warming. I request that the Commission should NOT impose on-peak/off-peak rates on exports by self-generators unless Idaho Power also allows customers access to on-peak rates for their consumption. It is very unfair to impose on-peak/off-peak credit rates on the energy one exports when there is no correlating on-peak/off-peak rates for the energy consumers use. I request a fair financial value be assigned to the renewable energy provided by customers. This is a resource to Idaho Power. Currently Idaho Power sells renewable energy at a premium to customers (Green Power Program). Idaho Power can avoid costs by sourcing its green power from customers and these very real avoidable costs should not be omitted from the study. I Finally, customers should have the option to sell the power they generate. Many Idahoans want to purchase and encourage local and cost effective green energy. We clearly provide additional renewable energy with our solar panels. Thank you for listening to my comments. Kathy Belknap "
