The following comment was submitted via PUCWeb:

Name: Robert Marcinko
Submission Time: Oct 18 2022 7:46PM
Email: rmarcink@dcdi.net
Telephone: 208-681-4863
Address: 3315 Lundburg Ln
Pocatello, ID 83204

Name of Utility Company: Idaho Power

Case ID: IPC-E-22-22

Comment: "I do have solar panels on my Pocatello home that are connected into Idaho Power's system and will never have them pay me back for the installation cost in my life time. I did it because it was the right thing to do. Idaho Power and all other utilities are corporations with a goal of making money, which is understandable. As such, regardless of their Green Energy initiatives, they are fighting against private entities to have their own solar systems and are subtly working to make it cost prohibitive to have private systems installed. The world is in an energy crisis and only a commission of your status can help control the utility companies from continuing on this path. Somehow private entities need financial encouragement to install solar systems and not be discouraged as they are getting to be more and more."

Dear Idaho Public Utilities Commission,

Please look carefully at the independent study conducted by Crossborder Energy, which points out several shortcomings in Idaho Power's own study on the costs and benefits of customer-owned rooftop solar. Idaho Power will use this study to justify trying to reduce compensation rates to solar owners. To arrive at fair rates, we first need a fair study.

Crossborder's study states, "We conclude that Idaho Power's choice of assumptions and calculation methods significantly undervalue the five components that the utility quantified. We present our own calculations of an ECR with these five elements. In addition, the VODER Study fails to quantify important benefits of distributed solar that the Commission directed the utility to analyze in Order No. 35284 -- benefits that are known and measurable, will impact rates, and will benefit Idaho ratepayers and citizens.?"

Idahoans deserve solar rates based on a more fair and complete analysis. I urge you to reject Idaho Power's study and look to Crossborder's study as a more accurate measure of the value (to ALL ratepayers) of customer-owned solar power.

Sincerely,

Franny Cheston
