

BEFORE THE IDAHO PUBLIC UTILITIES COMMISSION

IN THE MATTER OF THE APPLICATION )  
OF IDAHO POWER COMPANY FOR ) CASE NO. IPC-E-23-11  
AUTHORITY TO INCREASE ITS RATES )  
AND CHARGES FOR ELECTRIC SERVICE )  
IN THE STATE OF IDAHO AND FOR )  
ASSOCIATED REGULATORY ACCOUNTING )  
TREATMENT. )  
\_\_\_\_\_ )

IDAHO POWER COMPANY

DIRECT TESTIMONY

OF

KELLEY NOE

1 Q. Please state your name and business address.

2 A. My name is Kelley Noe. My business address is  
3 1221 West Idaho Street, Boise, Idaho.

4 Q. By whom are you employed and in what capacity?

5 A. I am employed by Idaho Power Company ("Idaho  
6 Power" or "Company") as a Regulatory Consultant.

7 Q. Please describe your educational background.

8 A. In May of 2004, I received a Bachelor of Business  
9 Administration in Finance from Boise State University. I  
10 have also attended electric utility ratemaking courses,  
11 including "The Basics: Practical Regulatory Training for  
12 the Electric Industry," a course offered through New Mexico  
13 State University's Center for Public Utilities as well as  
14 "Introduction to Rate Design and Cost of Service Concepts  
15 and Techniques" presented by Electric Utilities  
16 Consultants, Inc.

17 Q. Please describe your business experience with  
18 Idaho Power Company.

19 A. In September 2006, I accepted a position at Idaho  
20 Power as a Financial Analyst in the Finance Department. My  
21 primary duties included performing credit reviews on  
22 current and prospective transmission customers as well as  
23 providing the financial support for Grid Operations,  
24 Planning, and Operations Analysis and Development. In  
25 October 2010, I accepted a Regulatory Analyst II position

1 within the Regulatory Affairs department of the Company. In  
2 2015, I was promoted to Senior Regulatory Analyst, and in  
3 2020 was promoted to my current position, Regulatory  
4 Consultant. My duties as a Regulatory Consultant include  
5 gathering, analyzing, and coordinating data from various  
6 departments throughout the Company required for preparing  
7 jurisdictional separation studies, developing complex cost-  
8 related studies, and the analysis of strategic regulatory  
9 issues.

10 Q. What is the scope of your testimony in this  
11 proceeding?

12 A. I am sponsoring testimony to summarize the  
13 development of the system revenue requirement for purposes  
14 of forecasting the Company's rate base, revenues, and  
15 expenses for the 2023 Test Year, as well as, quantifying  
16 the Idaho Jurisdictional Revenue Requirement resulting from  
17 the Jurisdictional Separation Study ("JSS") for the twelve  
18 months ending December 31, 2023.

19 Q. Have you prepared exhibits for this proceeding?

20 A. Yes. I am offering the following exhibits:

21 1. Exhibit No. 31, Major Plant Additions

22 Annualized for 2023

23 2. Exhibit No. 32, Depreciation & Amortization

24 Annualizing Adjustments

25 3. Exhibit No. 33, Summary of Payroll-Related

1 Annualizing Adjustments

2 4. Exhibit No. 34, Development of System  
3 Revenue Requirement

4 5. Exhibit No. 35, Jurisdictional Separation  
5 Study - Idaho Revenue Requirement.

6 ***Development of the System Revenue Requirement***

7 Q. Could you briefly summarize how the Company  
8 developed its 2023 Test Year?

9 A. Yes. As described in the Direct Testimonies and  
10 Exhibits of Company Witnesses Ms. Paula Jeppsen and Mr.  
11 Matthew Larkin, the development of the 2023 Test Year  
12 begins with 2022 actual financial data ("2022 Actuals").  
13 The 2022 Actuals were adjusted to reflect currently  
14 approved ratemaking adjustments and amounts previously  
15 deferred related to wildfire mitigation ("WFM") in 2022 to  
16 arrive at 2022 adjusted actual financial information ("2022  
17 Base"). The 2022 Base was then adjusted to reach 2023  
18 forecasted financial levels ("2023 Unadjusted Test Year").  
19 After the 2023 Unadjusted Test Year figures were compiled,  
20 they were provided to me as the starting point for the  
21 development of the Company's total 2023 Test Year figures  
22 used in this filing.

23 Q. Were any additional adjustments made to the 2023  
24 Unadjusted Test Year amounts to reach the Company's total  
25 2023 Test Year figures?

1           A.    Yes. Exhibits 31 through 33 illustrate the  
2 annualizing adjustments used to develop the total 2023 rate  
3 base and net income figures used in the Company’s 2023 Test  
4 Year.

5           Q.    Please describe the role of annualizing  
6 adjustments in this filing.

7           A.    At Mr. Larkin’s direction, I performed several  
8 annualizing adjustments to amounts that are incurred within  
9 the Test Year but need to be reflected for the full year on  
10 an ongoing basis.

11          Q.    Please describe the annualizing adjustments made  
12 for “Major Plant Additions.”

13          A.    “Major Plant Additions,” illustrated in Exhibit  
14 No. 31, are defined as those investments exceeding \$8  
15 million that will close to the Company’s electric plant-in-  
16 service accounts during the calendar year 2023. A month-  
17 by-month forecast of 2023 electric plant-in-service and the  
18 13-month average balances provided by Ms. Jeppsen form the  
19 beginning point for the analysis. Annualizing adjustments  
20 are applied only to the 2023 plant additions that qualify  
21 as Major Plant Additions to establish the amount of  
22 investment that would have been recorded had the plant been  
23 in service throughout the entire year.

24                 As reflected in Exhibit No. 31, the difference between  
25 what had been forecast for these investments in the initial

1 analysis compared to the annualized forecast, as  
2 illustrated in column 8 - Net Annualizing Adjustments, is  
3 the \$161,434,512 annualizing adjustment for the Company's  
4 electric plant-in-service investment in this filing.  
5 Additional annualizing adjustments associated with Major  
6 Plant Additions include \$498,233 in property taxes (column  
7 11 - Annual Composite Property Tax) and \$75,269 in property  
8 insurance (column 13 - Annual Insurance Expense). Because  
9 none of the Major Plant Additions were attributable to load  
10 growth not already accounted for within the load forecast  
11 (see Summary on Exhibit No. 31), an imputed revenue  
12 adjustment was not required.

13 Q. How did you determine the Depreciation &  
14 Amortization Annualizing Adjustments?

15 A. Depreciation and amortization expenses presented  
16 in Exhibit No. 32 are forecast on a month-by-month basis  
17 during 2023 and summarized in the column entitled  
18 "Forecasted Depreciation Expense" (column 4). The expenses  
19 for December 2023 are multiplied by twelve to calculate the  
20 "Annualized Depreciation Expense" (column 3). The  
21 difference between these two columns equals the  
22 "Annualizing Adjustment" (column 5) of \$8,884,245  
23 depreciation expense and \$95,740 amortization expense.  
24 Adjustments of \$4,442,123 to Accumulated Depreciation and  
25 \$47,870 to Accumulated Amortization, illustrated as the

1 "Reserve Adjustment" (column 6), are conventionally  
2 computed as half the expense amounts.

3 Q. Were there any additional labor-related  
4 annualizing adjustments?

5 A. Yes. As set forth in Exhibit No. 33, Summary of  
6 Payroll-Related Annualizing Adjustments, there are two  
7 additional labor-related annualizing adjustments in this  
8 filing totaling \$9,561,383.

9 The first adjustment utilizes 2022 actual labor data  
10 as a proxy to annualize 2023 payroll and reflects an entire  
11 year of expense at that year-end level. Because the method  
12 applied to forecast the 2023 Operations and Maintenance  
13 ("O&M") labor expense (detailed in the Direct Testimony of  
14 Mr. Larkin) provided only a forecast of the annual 2023 O&M  
15 labor expense, a December labor expense amount from which a  
16 conventional annualizing labor adjustment could be  
17 calculated was not known. Therefore, an annualizing  
18 adjustment based upon actual 2022 labor was calculated and  
19 used as a proxy to adjust the O&M labor total for the 2023  
20 Test Year. After applying the Company's O&M and benefit  
21 loading percentages, the annualizing adjustment is  
22 \$3,683,272.

23 The second adjustment of \$5,878,111 reflects the  
24 projected 2024 salary structure adjustment of 3 percent.  
25 This adjustment was applied to the annualized 2023 payroll

1 and has been adjusted by the Company's O&M and benefit  
2 loading percentages.

3 Q. How is Exhibit No. 34, Development of System  
4 Revenue Requirement organized?

5 A. Exhibit No. 34 provides the development of the  
6 adjusted total electric system rate base and net income for  
7 the test year ending December 31, 2023.

8 The first set of data, displayed in column 3 "2022  
9 Actual", is the unadjusted 2022 actual results of  
10 operations provided by Ms. Jeppsen. The adjustments  
11 proposed by the Company for purposes of developing the 2023  
12 adjusted total electric system combined rate base and net  
13 income are shown in columns 4 ("2022 Actual Adjustments"),  
14 6 ("Forecast Adjustments"), and 8 ("Annualizing  
15 Adjustment"), with the total system adjusted test year rate  
16 base, expenses, and revenues summarized in column 9. The  
17 proposed adjustments and resulting base amounts are set  
18 forth in columns 4 through 8 and result in the 2023 test  
19 year data set in column 9, described more fully as follows:

20 (1) Column 4, titled "2022 Actual Adjustments",  
21 was provided by Ms. Jeppsen and Company Witness Ms. Jessica  
22 Brady. It reflects currently approved regulatory  
23 adjustments that should be applied to the 2022 actual  
24 results prior to applying methods to adjust to 2023 levels,  
25 as well as adjustments to reflect WFM related expenses

1 deferred in 2022 thus resetting 2022 actual WFM-related O&M  
2 to what it would have been absent the deferral;

3 (2) Column 5, titled "2022 Base" is the adjusted  
4 base to which the methods to create a 2023 test year were  
5 applied;

6 (3) Column 6, titled "Forecast Adjustments",  
7 reflects the results of the various methods from the  
8 Forecast Methodology Manual sponsored by Mr. Larkin and  
9 detailed in his testimony, that were used to adjust totals  
10 from the 2022 Base to a 2023 Unadjusted Test Year.

11 (4) Column 7, titled "2023 Unadjusted Test Year",  
12 includes the resulting dataset once the standard regulatory  
13 adjustments and various methods were applied;

14 (5) Column 8, titled "Annualizing Adjustment",  
15 includes standard annualizing adjustments, to reflect  
16 changes that occur within the test year, but need to be  
17 incorporated for the full year on an ongoing basis. All  
18 annualizing adjustments included in this filing were  
19 discussed earlier in my testimony.

20 (6) Column 9, titled "2023 Test Year", is the  
21 resulting dataset for the 2023 test year (twelve months  
22 ending December 31, 2023).

23 Q. How did you develop the total combined rate base  
24 for the 2023 Test Year?

25 A. Page two of Exhibit No. 34 summarizes the

1 development of rate base components for the 2023 Test Year.  
2 The total combined rate base, based on actual, unadjusted  
3 2022 results was \$3,870,331,388 (column 3, line 67). After  
4 adjustments, the total combined rate base for the 2023 Test  
5 Year increases to \$4,092,522,974 (column 9, line 67).

6 Q. Have you prepared any exhibits that detail the  
7 total system net income?

8 A. Yes. Page two of Exhibit No. 34 also includes the  
9 development of the total system net income for the twelve  
10 months ending December 31, 2023. Operating revenues are  
11 summarized on line 73. Total operating expenses are  
12 summarized on line 84.

13 ***Idaho Jurisdictional Revenue Requirement***

14 Q. Have you prepared an exhibit that sets forth the  
15 Idaho jurisdictional revenue deficiency?

16 A. Yes. I prepared Exhibit No. 35 titled  
17 "Jurisdictional Separation Study - Idaho Revenue  
18 Requirement" consisting of 36 pages.

19 Q. Please describe what is included in the  
20 Jurisdictional Separation Study report.

21 A. Exhibit No. 35 is the complete Jurisdictional  
22 Separation Study report detailing the allocation of each  
23 component of rate base, operating revenues, and expenses by  
24 Federal Energy Regulatory Commission ("FERC") account  
25 resulting in the Idaho jurisdictional revenue deficiency.

1 The JSS is organized as follows:

- 2 • Summary of Results
- 3 • Table 1 - Electric Plant in Service;
- 4 • Table 2 - Accumulated Provision for
- 5 Depreciation (and Amortization);
- 6 • Table 3 - Additions & Deductions to Rate Base;
- 7 • Table 4 - Operating Revenues;
- 8 • Table 5 - Operation & Maintenance Expenses;
- 9 • Table 6 - Depreciation & Amortization Expense;
- 10 • Table 7 - Taxes Other Than Income Taxes;
- 11 • Table 8 - Regulatory Debits & Credits;
- 12 • Table 9 - Income Taxes;
- 13 • Table 10 - Calculation of Federal Income Tax;
- 14 • Table 11 - Oregon State Income Tax;
- 15 • Table 12 - Idaho State Income Tax and Other
- 16 State Income Tax;
- 17 • Table 13 - Development of Labor Related
- 18 Allocator;
- 19 • Table 14 - Allocation Factors;
- 20 • Table 15 - Allocation Factors-Ratios.

21 Q. Please discuss the methodology used to  
22 jurisdictionally separate costs in the preparation of this  
23 study.

24 A. A three-step process was used to separate costs

1 among jurisdictions. The three steps are  
2 functionalization, classification, and allocation of costs.  
3 In all three steps, recognition was given to the way in  
4 which costs are incurred by relating these costs to utility  
5 operations.

6 Q. Would you please briefly explain what each of the  
7 three steps (functionalization, classification, and  
8 allocation) entails?

9 A. Functionalized costs are identified with utility  
10 operating functions such as generation, transmission, and  
11 distribution. Individual plant items are examined and,  
12 where possible, the associated investment costs are  
13 assigned to one or more operating functions. Classification  
14 groups the functionalized costs into three categories:  
15 demand-related, energy-related, and customer-related.

16 Once the Company's total system costs are classified  
17 and assigned to the appropriate function, they are  
18 allocated among jurisdictions.

19 The process of allocation is one of apportioning the  
20 total system cost among jurisdictions by introducing  
21 allocation factors into the process. An allocation factor  
22 is an array of numbers which specifies the jurisdictional  
23 value as a share or percent of the total system quantity.  
24 For example, in the case of energy-related costs, the  
25 allocation factor is annual jurisdictional energy use,

1 adjusted for losses, divided by the total system energy  
2 use.

3       Once individual accounts have been allocated to the  
4 various jurisdictions, it is possible to summarize these  
5 into total utility rate base and net income by  
6 jurisdiction. The results are stated in a summary form to  
7 measure adequacy of revenues for the jurisdiction under  
8 consideration. The measure of adequacy is typically the  
9 rate of return earned on rate base, which is compared to  
10 the requested rate of return.

11       Q. Is the methodology used to separate costs by  
12 jurisdiction and calculate the Idaho jurisdictional revenue  
13 requirement in the present case primarily the same  
14 methodology utilized in the Company's last general rate  
15 case, Case No. IPC-E-11-08?

16       A. Yes.

17       Q. How have the various functional plant and cost  
18 items been allocated?

19       A. The average of the twelve monthly coincident peak  
20 demands was used to allocate the demand-related costs.  
21 This allocation method has been used by the Company for at  
22 least two decades in all of its filings requiring a  
23 jurisdictional separation study. This allocation method  
24 was adopted by this Commission and also accepted by the  
25 Public Utility Commission of Oregon. The demand-related

1 allocation factors used in the study are designated as D10,  
2 D11, D12 and D60. The respective values used in these  
3 demand allocation factors are shown at line numbers 1048  
4 through 1051 of Exhibit No. 35.

5 Q. How were the energy-related expenses allocated  
6 among jurisdictions?

7 A. Energy-related expenses were allocated based on  
8 normalized jurisdictional kilowatt-hour sales and adjusted  
9 for losses to establish energy requirements at the  
10 generation level. The energy-related allocation factors  
11 used in the study are designated as E10 and E99. The  
12 respective values used in these energy allocation factors  
13 are shown on lines 1054 and 1055 of Exhibit No. 35.

14 Q. What was the method by which you allocated  
15 customer-related costs?

16 A. The principal customer-related expenses which  
17 required allocation, were meter reading (FERC Account 902)  
18 and customer accounting and billing (FERC Account 903).  
19 These accounts were allocated based upon a review of actual  
20 costs to read meters and prepare monthly bills or  
21 statements.

22 Q. What method was used to allocate certain labor-  
23 related administrative and general expenses?

24 A. In accordance with FERC-approved procedures,  
25 administrative and general expenses were allocated in

1 accordance with functionalized wages and salaries. These  
2 labor-related allocation factors are shown on lines 848  
3 through 1043 of Exhibit No. 35.

4 Q. Please describe the derivation of the 2023 total  
5 system allocation factors used in this case.

6 A. The allocation factors in the 2023 JSS were based  
7 on either the 2022 year-end data or 2023 forecast data.  
8 The capacity or demand-related allocation factors (D10,  
9 D11, D12 and D60) were created using the 2022 demand ratios  
10 from the load research analysis applied to the 2023 test  
11 year energy. The energy-related allocation factors were the  
12 2023 test year load at generation level (E10) and at  
13 customer level (E99). This data is prepared by the  
14 Company's Load Research and Forecasting Department and is  
15 further described in workpapers filed by Mr. Larkin.

16 Q. Briefly describe the manner in which you  
17 allocated electric plant-in-service as shown in Table 1 of  
18 Exhibit No. 35.

19 A. Both production and transmission plant were  
20 allocated to each jurisdiction based on the average of the  
21 twelve-monthly coincident peaks. Distribution plant,  
22 unless otherwise noted, was directly allocated to Idaho  
23 based on 2022 actual jurisdictional data.

24 Q. Please describe the manner in which you allocated  
25 general electric plant-in-service.

1 A. General plant was allocated on the same basis as  
2 the sum of the allocated investments in production,  
3 transmission, and distribution plant.

4 Q. How have you allocated the accumulated provision  
5 for depreciation and amortization of other utility plant?

6 A. Accumulated provision for depreciation and  
7 amortization totals, as shown on Table 2 of Exhibit No. 35,  
8 were allocated based on the related plant account as  
9 allocated in Table 1.

10 Q. How did you allocate other additions to or  
11 deductions from rate base?

12 A. Table 3 of Exhibit No. 35 details the allocation  
13 of all other additions to or deductions from rate base.  
14 Deductions from rate base include customer advances for  
15 construction that were directly assigned to customers by  
16 jurisdiction, and the accumulated deferred income taxes  
17 that were allocated by plant, customer advances for  
18 construction, and labor. Additions to rate base include:  
19 (1) materials and supplies which were functionalized and  
20 allocated by the respective plant allocators, (2) fuel  
21 inventory that was allocated on the basis of energy, (3)  
22 components of Idaho Energy Resources Co. ("IERCo") the  
23 Company's fuel subsidiary, which were allocated based on  
24 energy, and (4) Commission-ordered deferred investment was  
25 either directly assigned to a specific jurisdiction or

1 allocated based on demand.

2 All rate base items, with the exception of other  
3 deferred programs, reflect a 13-month average of ending  
4 balances or average of year-end balances.

5 Q. How did you assign the firm operating revenues to  
6 each jurisdiction?

7 A. Table 4 of Exhibit No. 35 contains the firm  
8 operating revenues directly assigned to each jurisdiction  
9 for the test year (twelve months ending December 31, 2023).  
10 Opportunity sales and financial losses are also credited to  
11 each jurisdiction in proportion to generation-level energy  
12 use.

13 Other operating revenues were either allocated among  
14 jurisdictions in a manner that offset related allocations  
15 of rate base or, where a particular revenue item could be  
16 associated with a specific jurisdiction, directly assigned.

17 Lastly, at the direction of Mr. Larkin I included the  
18 transfer adjustments for both the Power Cost Adjustment  
19 ("PCA") mechanism and the Energy Efficiency rider labor in  
20 this table to more accurately reflect the net impact to  
21 customers in the revenue requirement calculation. The  
22 Direct Testimony of Mr. Pawel Goralski details the  
23 quantification of the revenue transfer from the PCA, and  
24 Mr. Larkin details the quantification of the Energy  
25 Efficiency rider offset.

1 Q. How are operation and maintenance expenses  
2 allocated to each jurisdiction?

3 A. The allocation of each O&M expense is detailed on  
4 Table 5 of Exhibit No. 35. In general, the basis for each  
5 allocation is identifiable with the source code listed on  
6 Exhibit No. 35. Demands are identified by a source code  
7 beginning with a "D" prefix, energy use is identified by a  
8 source code beginning with an "E" prefix, related plant is  
9 identified by a line number source code, and customer-  
10 weighted allocation factors begin with a "CW" prefix.

11 Q. In what manner are supervision and engineering  
12 expenses treated throughout the allocation of operation and  
13 maintenance expenses?

14 A. For the applicable expense account in each  
15 functional group, the labor component was separately  
16 allocated in accordance with the detail provided on Table  
17 13 of Exhibit No. 35. The total of allocated labor in each  
18 functional group became the basis for the allocation of  
19 supervision and engineering expense. Total allocated labor  
20 expense served the additional purpose of allocating  
21 employee pension and other labor-related taxes and  
22 expenses. Table 13 of Exhibit No. 35 details the  
23 development of all the labor-related allocation factors  
24 used in this study.

25 Q. How have you allocated depreciation expense and

1 amortization of limited term plant?

2 A. The allocation of depreciation expense and  
3 amortization of limited term plant is set forth in Table 6  
4 of Exhibit No. 35. These expenses were identified by type  
5 of production plant or by primary plant account for other  
6 functional plant groups and allocated consistent with the  
7 related plant account.

8 Q. How did you approach the allocation of taxes  
9 other than income taxes?

10 A. As set forth in Table 7 of Exhibit No. 35, taxes  
11 other than income taxes were treated individually and  
12 allocated in a manner consistent with the bases by which  
13 the respective taxes are assessed.

14 Q. How did you address the amortization of  
15 regulatory debits and credits?

16 A. Table 8 of Exhibit No. 35 details the  
17 amortization of regulatory debits and credits and were  
18 directly assigned to the appropriate jurisdiction.

19 Q. Does the JSS report detail how deferred income  
20 taxes and investment tax credit adjustments were allocated?

21 A. Yes. The expenses shown on Table 9 of Exhibit No.  
22 35 consist of deferred income taxes and the investment tax  
23 credit adjustments, which were allocated based on the  
24 Company's plant investment and net income before tax  
25 adjustments. State and federal income tax liabilities are

1 also summarized on Table 9. The income taxes shown on  
2 Tables 10 through 12 were obtained from the Company's Tax  
3 Department.

4 Q. How were federal and state income taxes, shown on  
5 Tables 10 through 12 of Exhibit No. 35, allocated in the  
6 JSS?

7 A. The respective tax bases were developed, and  
8 taxes were calculated directly for each jurisdiction.  
9 Operating income before taxes represents adjusted operating  
10 revenues less all adjusted operating expenses treated  
11 heretofore with the exception of deferred income taxes and  
12 investment tax credits. Adjusted interest expense was  
13 allocated by the combined rate base to develop net  
14 operating income before taxes. As discussed earlier in  
15 this testimony, subsequent additions to or deductions from  
16 the respective tax bases were allocated to each  
17 jurisdiction by aligning it with its causation or  
18 fundamental association. In this manner, taxable income  
19 for each jurisdiction was developed and the appropriate tax  
20 rate was applied. Final tax amounts result after the  
21 allocation of adjustments and tax credits. All details  
22 relating to the calculation of federal, Oregon, Idaho, and  
23 other state income taxes are found on Tables 10, 11, and  
24 12.

25 Q. What is the purpose of Tables 13 through 15 of

1 Exhibit No. 35?

2 A. Tables 13 through 15 of Exhibit No. 35 list the  
3 principal allocation factors used in the JSS and the  
4 respective jurisdictional values for each allocation  
5 factor. Table 15 lists the ratios of the principal  
6 allocation factors included in Table 14.

7 Q. How was the Idaho jurisdictional revenue  
8 deficiency developed?

9 A. The summary of JSS results is presented on pages  
10 one and two of Exhibit No. 35. The development of the Idaho  
11 jurisdictional revenue deficiency is presented in the  
12 column entitled "Idaho Retail" on page one of Exhibit No.  
13 35. As discussed further in Mr. Larkin's testimony, due to  
14 the approved balancing account mechanisms for recovery of  
15 coal-related costs at the Jim Bridger Power Plant  
16 ("Bridger") and North Valmy Power Plant ("Valmy"), a true  
17 revenue deficiency cannot be computed until the levelized  
18 revenue requirement associated with these mechanisms is  
19 accounted for in the calculation. While the approved  
20 revenue collection is embedded in the Firm Jurisdictional  
21 Sales contained on line 9 of the JSS, the corresponding  
22 costs were removed from the determination of the Company's  
23 non-levelized revenue requirement as described by Mr.  
24 Larkin. Therefore, JSS summary information contained on  
25 lines 6 through 38 will understate required revenues

1 because it only reflects currently approved revenues  
2 related to non-fuel coal recovery, not the corresponding  
3 currently approved costs.

4 Q. How was the Idaho jurisdictional revenue  
5 requirement calculated before adjusting for Bridger and  
6 Valmy?

7 A. The pre-adjusted Idaho consolidated operating  
8 income of \$287,151,546 (line 26) resulted in a return on  
9 rate base of 7.34 percent (line 27). Based upon the  
10 Company's request for an overall rate of return of 7.702  
11 percent provided by Company Witness Mr. Brian Buckham, the  
12 Company's Idaho jurisdictional net income should be  
13 \$301,346,128, as shown on line 32. The resulting earnings  
14 deficiency is \$14,194,582, as shown on line 33. Inclusion  
15 of Hells Canyon Relicensing Construction Work in Progress  
16 allowed in the Company's most recent rate case (Case No.  
17 IPC-E-11-08) of \$6,537,444, as shown on line 34, increases  
18 the earnings deficiency to \$20,732,026, as shown on line  
19 35. Once again, as discussed previously, this figure is  
20 understated and must be adjusted because it includes  
21 Bridger and Valmy coal-related revenue recovery without  
22 reflecting the corresponding costs.

23 Q. What net-to-gross or incremental income tax  
24 factor did you use in developing the Idaho jurisdictional  
25 revenue deficiency?

1           A.    Yes, at the direction of Company Witness Mr.  
2 Timothy Tatum, I calculated the Idaho jurisdictional  
3 revenue requirement of the 120 MW of battery storage that  
4 is scheduled to come online in 2023 and included that  
5 result as a reduction to the Idaho jurisdictional revenue  
6 requirement in an effort to mitigate the increase to  
7 customers ("Battery Mitigation") by adding the investment  
8 tax credits to the current accumulated deferred investment  
9 tax credit ("ADITC") mechanism and adjusting the yearly  
10 cap. The impact of this mitigation option is reflected on  
11 line 42 of the JSS and is discussed fully in the testimony  
12 of Mr. Tatum.

13           Q.    What is the resulting Idaho jurisdictional  
14 revenue deficiency including the Battery Mitigation?

15           A.    The result of the Jurisdictional Separation  
16 Study, as shown on page one, line 43 of Exhibit No. 35,  
17 indicates a total revenue deficiency of \$111.3 million for  
18 the Idaho retail jurisdiction. This represents a required  
19 8.61 percent increase in normalized Idaho jurisdictional  
20 revenues.

21           Q.    Does this conclude your testimony?

22           A.    Yes, it does.

**DECLARATION OF KELLEY NOE**

I, Kelley Noe, declare under penalty of perjury under the laws of the state of Idaho:

1. My name is Kelley Noe. I am employed by Idaho Power Company as Regulatory Consultant in the Regulatory Affairs Department.

2. On behalf of Idaho Power, I present this pre-filed direct testimony and Exhibit Nos. 31-35 in this matter.

3. To the best of my knowledge, my pre-filed direct testimony and exhibit are true and accurate.

I hereby declare that the above statement is true to the best of my knowledge and belief, and that I understand it is made for use as evidence before the Idaho Public Utilities Commission and is subject to penalty for perjury.

SIGNED this 1st day of June 2023, at Boise, Idaho.

Signed: \_\_\_\_\_  
Kelley Noe
