Name of Utility Company: Idaho Power

Case ID: IPC-E-23-11

Comment: "I installed solar cells on my roof in 2021. At that time, my electric meter was changed so it would reflect power generated and sent into the power grid. Now Idaho Power wants to change the way my power generation is credited. I disagree with this for 2 reasons. First, I am not being subsidized by non-solar customers, as they claim. Following that logic, customers using less power than the average should also be charged more. Second, their attempt to only grandfather-in customers with solar cells prior to an arbitrary date does not honor the arrangement that I made. I want the current net-metering method to continue, unchanged!"
