Case ID: IPC-E-23-14

Comment: "Seems like with this change, it won't make financial sense for people to install solar anymore. (My install barely made sense under current net metering). Since I believe going green is one of Idaho Power and the IPUC's goals, how is IPUC going to incentivize people to install solar after this change is made? Additional tax rebates like other states have done?"

I also think that anyone with solar currently installed should be grandfathered in, since we made a large financial decision to help our environment and state based on current standards.

Thanks for your consideration!"

Comment: "1) I recognize that Idaho Power must make a profit. That said, this proposal will discourage people from installing solar – something we certainly need. As tax credits are decreased or eliminated, people will pay even more attention to this issue.

2) The entire point of installing solar is to generate most enough energy to cover all of your energy needs for the year. If we are not permitted to build up energy credits in the summer, then we will still end up with a significant bill in the winter. Therefore we should continue to be able to build up enough credits to cover our entire bill.

3) Regarding energy production that exceeds this level, we should be paid a fair price for it. I believe that rather than a set price, we should be paid a percentage of the retail price we would have paid if we consumed that same energy from the grid."

Comment: "We have just received notice from Idaho Power regarding changes to the on-site generation compensation structure and would like to express our concern over approval of the proposed revisions. In essence Idaho Power is requesting to reimburse us less for our Solar generation system while benefiting from us using less power each month allowing them to provider power to the community at lower rates. We have taken on the burden of cost for solar for several reasons, mainly to help be more environmentally aware and decrease our carbon footprint while utilizing a ready resource. We are helping Idaho Power keep costs down by installing solar. We do not agree with a payment structure that decreases our reimbursement for power that Idaho Power is getting without cost to them as we have taken on that burden.

Thank you for your consideration "

Comment: "I find this case to be very unfair for people who generate their own power. You want to punish people for generating their own energy. With the new structure it will take us 3 times longer to pay off our new system. How does this proposed change benefit us? These changes appear very one-sided, only benefiting the utilities. Solar will be the generators and distributors, and IPU will be the money collectors. Seems like a pretty crooked system to me."
