Comment: "Idaho Utility should make public hearings on solar energy more public."

Comment: "I applaud Idaho Power for its current and planned "renewable resources power production" but not for its proposed solar credit reduction. Please deny Idaho Power's proposed reduction for self-generated solar power -- rooftop systems etc. Reducing credit for excess power added to the grid by a customer's personal solar setup is exactly the wrong thing to do. We should make it financially easier, not harder, for people to invest in solar rooftop systems. We should encourage more people to add excess power to the grid by retaining the current solar credit formula.

If IPUC approves the credit reduction, at least grandfather in all personal systems in place and producing power at the time of the IPUC decision, not sometime earlier as now proposed. Thank you for considering my comments."

Comment: "The new proposed net metering rules seems very unfair for the consumer and very lucrative for Idaho Power. They are only required to change a meter on my house so very low cost for them then they are going to only pay me roughly 50% of the amount they are going to turn around and charge me when I need it. I know they are proposing a higher rate for sometime of the year but that is a small percentage of the year compared to the other. This seem very much like a racket to me I am selling them a product and then turn around and sell me the same thing back for 50% more then they paid for it. I can see charging different rates for those who do produce power and have them more of a one to one metering. Then have those that are producing power into the grid a higher rate sense they are relying 100% on Idaho Power. Rather than helping feed into the grid and share more resources with other this makes it so I would rather be disconnected from the grid and produce and use everything on my own. The other option would be to give me a yearly tax credit for the lose of income for all the power on produce that I am paid a below market value on. It seem very unfair to have the public pay for the production of Idaho Power that they turn around and make a 50% profit on. This is greatly going to hurt the solar production in Idaho for the average home owner."

Comment: "My comment is simple; commissioners please do not allow Idaho Power to implement their proposed rate restructure for solar producing customers. It is unfair and contrary to the public good. We should be rewarding people that install solar power not penalizing them."
