Comment: "I installed solar panels in 2022 with the understanding that it was highly unlikely that Idaho Power would be able change from the current 1 for 1 credit for excess power generation. I was told they have been trying to change the full credit rate for 10 years and have been unsuccessful. Had I known that there would be a reduction in credit I would not have installed the panels. I feel those that currently have solar panels should be grandfathered into the Net Metering full credit plan. This attempt further discourages new solar panel customers and does not help the environment."
