Comment: "I encourage Idaho IPC to maintain existing policy of "NET BILLING" for next 2-5 years letting current adoption of solar & wind, geothermal produce better information for a more correct decision on long term. Current adoption should lower rates for all customers."

Comment: "The current system of payback for solar power is fair. I think everyone with current solar power in Idaho should be grandfathered in to the current system. Also, Idaho power should not be allowed to regulate our rights to have battery power storage in our private homes."
