Comment: "We installed a solar array in summer of 2021 to supplement our current and long-term future energy costs and to be good environmentally responsible citizens and ease the ever increasing demand on our already outdated and weak electrical grid. Privately owned homes only represents a little over 1% of all solar generation in Idaho - how can this be an issue for Idaho Power business?"

Don't let Idaho Power change the current credit rate/compensation structure - If it is reduced, it would affect our monthly bill and more so, have a detrimental impact on the adoption of new solar systems on residential roofs in Idaho. We need these types of alternative and sustainable sources of energy as the population of Idaho ever increases and taxes our electrical grid.

Solar and wind are key power sources available to us and should be welcomed by Idaho Power, not seen as a competitor. Don't let this type of "free" energy be still-born in Idaho by a large energy company that simply needs to learn to embrace it and begin to work along with it - it only makes sense and benefits all of us in the long run.

Comment: "I find this proposal to be counter intuitive, the way our economy is and the push to green energy.

The solar generator should not be given a basic rate increase. We are trying to be good stewards of our environment and we penalize Sincerely Rick Williams "

Comment: "My main concern with the proposed change is the real time billing. Every utility I have ever used has taken a reading at the end of the billing period. This concept of charging as you go is completely unprecedented. The net per month metering seems like an honest attempt to capture customer use and charge accordingly. I'd like the option to sell my excess power to other buyers on the grid the same as Idaho Power. "

Please reject Idaho Power's proposal in this case. Their proposal diminishes the value of the electricity I put out to the grid (neighbors). I don't understand why the power company doesn't give customers incentives to reduce our carbon footprint.

Thank you,

Kit Herndon

Comment: "I don't understand how real-time net billing works but it seems like a money grab on the part of Idaho Power. It certainly is unfair to current solar customers to change the rules and backdate that change to 2019. All current solar customers should be allowed continue the previous billing arrangement. We made a large investment in solar and had no idea that the rules could change like this."

I am very disappointed in Idaho Power's proposal to devalue homeowner owned solar power and urge you to reject their proposal. Independent analysis reveals markedly different values for the benefits that Idaho Power gives to the electricity produced by ratepayers. Idaho Power's study appears to have been reverse engineered to try to give values to get the results they wanted. A more independent study is needed.

Additionally, this is an issue that affects many people from ratepayers to businesses that are in the green energy sector. Hearings are needed that give more advanced notice and that are in times that allow

those who are working to attend. Your current times shut out the vast majority of those who work, unless they are fortunate enough to take time off from work. Public utilities, and the commission, need to have input from the public.

Sincerely,

Mitch Long
