# Promote, don't smother Idaho's Clean Energy Future

Petition by [Kerrin McCall](#) (/contact\_creator.html?petition\_id=88970)

To be delivered to **Idaho Public Utilities Commission and Darryl Anderson Idaho Power Company**

Tell Idaho Power and the Public Utilities Commission to play fair with solar power developers by giving the same 20-year contract security Idaho Power receives for their own projects.

There are currently 1,118 signatures. NEW goal - We need 2,000 signatures!

```

PETITION BACKGROUND

With more than 200 sunny days a year, Idaho is enjoying a boom in solar energy development. This is great news, since solar is quicker, cleaner, and cheaper than building another dam or dirty coal-fired plant.

Idaho Power Company is currently experiencing record profits at the expense of its ratepayers' environmental and public health. To maintain its antiquated business model, the company is trying to prevent clean energy development by limiting 20-year contracts to two years. Anything less than a long-term contract makes it nearly impossible for renewable energy businesses to secure financing.

Investing in clean energy benefits Idaho's economy, protects Idaho's air and water, limits carbon emissions, and preserves a clean future.

For more information, please visit the following link:

PV solar panels are now more inexpensive and efficient. It is time for a massive movement toward dispersed generation. We can produce clean energy without impacts from sites already developed, our homes. The energy industry needs to accommodate this movement. It has to be about more than just profit. The lives of our grandchildren depend on it.

Dear PUC, The time is now critical for us as a collective society, to look at empowering the paradigm shift to a progressive and balanced sustainable and renewable energy model. Please level the playing field so solar power developers can compete in the energy market. If we are to continue growing economically on a state, national and international level, we need to shift from the limiting regulations and belief systems that are currently in place. Clean, renewable energy resources are imperative for our country's future and for the sustainability of our planet for future generations to come. Thank you.

It seems like the only people afraid of change are the ones (Idaho Power) who stand to potentially lose money with change. This type of change, however, is for the higher good. Those who embrace the ideals of higher good are those who will prosper. Fighting the higher good is a sure path to extinction. Please let the free market and respect the the public's desire to change.

Idaho power is proving to be a disingenuous partnership. They profess to be interested in moving forward with a sustainable energy program while in background they are moving to put regulations in place that will prevent Idaho from stepping into the future by maintaining old dirty fossil fuel energy systems. This should not be tolerated by any Idahoan. They are controlling our freedom to choose.

I enjoy the benefits from solar panels installed on my home in 2014. I appreciate the ability to tie into the grid, generate my own power, save credits for future use and use the grid when I need it. Others should have the certainty of supply and economics.

It will be cheaper for Idahoans to utilize the abundant solar power here than to continue to invest in coal plants, which will need to be cleaned up for 111(d) requirements and which foul our air, land and water. Further, solar peaks when most needed in summer, when costs are highest. This coal is shipped from out of state, increasing risk of environmental damage. Please afford solar QF PURPA providers a level playing ground will polluting sources to minimize cost and risk to customers.

Solar power is a technological alternative to continuous rising demand for power in the 21st Century. Traditional power grids will also grow but with less urgency if we also have incentive to install Solar. A win win for both and a super win for America.

Mike Saville  
McCammon, ID 83250  
Mar 4, 2015

Please maintain fair and equal regulation without preferences for all private companies which is the ethical road to follow. Anything less than a long-term contract makes it impossible for renewable energy businesses to secure financing.

2 year contract terms for solar make it nearly impossible to find investors for utility scale projects. The lifespan of solar panels is at least 30 years. 30 years of energy production with zero fuel costs and zero carbon emissions. The contract length for solar projects should be more closely matched to the asset's lifespan than the proposed 2 year term.

Investments in wind and solar power as support power sources to the energy grid are wise investments and take advanced planning to include adjusting how energy business is conducted. This step sounds like a good one to ensure Idaho Power explores and keeps its options open to all forms of energy consumption, giving preference to sustainable energy consumption processes.

I read Snake River Alliance's take on this situation and I couldn't agree more with them. All players know that clean energy is the future and that future has to start now with securing 20-year contracts to solar power developers, not two or five year contracts.

Time to grant the same level operating conditions for solar power developers that Idaho Power is getting for their power projects. Solar offers Idaho and our region a brighter future. Our family supports giving the solar industry contracts that are fair business deals. Let's help move Idaho's energy portfolio mix into the growing world wide renewable future.

I think solar has got to be supported in order for it to be sustainable. Other countries (Germany for one) realize this. We travel for 2 months every winter to Nevada, Arizona and So Calif. It is amazing how much solar there is. It will be an important. Move for Idaho to move forward with solar. We would put panels on our house like we have the camper if there was some financial incentives to help with the initial cost!

Idaho Power will need all of the renewable energy that is available to its system. Hydro Power although considered a renewable resource by some is much more limited than solar and solar's cost per kwhr continues to decline. Contracting for as much solar as available is Idaho Power's best option for a clean sustainable energy future!

Yet again, why protect the status quo when things can be so much better? Instead of protecting out-of-state dirty energy, let's support in-state clean energy and invest in a more sustainable economic and environmental future!!

Billy Mann  
Ketchum, ID 83340  
Feb 28, 2015

---

John Finnell  
Hailey, ID 83333  
Feb 28, 2015

---

Investing in clean energy benefits Idaho's economy, protects Idaho's air and water, limits carbon emissions and preserves a clean future. Please think of future generations.

Daralene Finnell  
Hailey, ID 83333  
Feb 28, 2015

---

Clean water, healthy air and intact environments we need to protect. All of the Science points to climate change, lets create laws which will encourage and encourage a business model which support clean renewable energies. This would include 20 year contract which will aid in the ability for the financing of innovative energy technologies and create new businesses and jobs .
