Dear Idaho Public Utilities Commission,

Every year, I experience the same things: smoke from Idaho wildfires closes down sports and school, increasing summer and winter temperatures means less snowfall and snowpack, drought, flooding, heavy rain, and hail which reduces crop yield. Future generations should not have to live like this. As a current 17-year-old, the decisions that come from utility companies will affect my kids, grandkids, and great-grandkids.

Now is the time to transition out of coal and into natural gas and other renewables such as solar, hydro, and wind. While transitioning to renewables may be more costly, it will benefit the Idaho and world communities more. Your kids and my kids need to grow up in a world and Idaho that is not polluted.

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. As one of the region's largest utilities and largest polluters, the actions of this utility impact our entire state and all Idaho utility customers like me. Rocky Mountain Power's Plan relies on continued coal use even in the face of declining coal economics and Clean Air Act violations at its coal plants. It also relies on last minute plans to build new gas pipelines and convert some coal plants to gas, even in the face of highly volatile future gas prices. Lastly, it relies on a last minute plan to build a new nuclear power facility using never-before-used technology with an unrealistic timeline and budget. This all represents a huge risk for Idaho's future, from our air and the impacts of climate change down to our pocketbooks.

Our state's other public utilities, Avista and Idaho Power, plan to stop burning coal by 2025 and 2028, respectively, and are doubling down on investments in energy efficiency, renewable energy, and tested storage technology. It's unfair for Idaho customers whose only electric utility option is Rocky Mountain Power to face additional risks and costs from their utility's reckless planning. Idahoans deserve a utility Plan that ensures least cost and least risk energy supply that is based in reality and thoughtful planning, not wishful false solutions. Please reject Rocky Mountain Power's 2021 Integrated Resource Plan.

Sincerely,

Ian E Schlater

Dear Idaho Public Utilities Commission,

Hello,

It's as simple as this: coal needs to go. Quickly.

Aside from the regional health and global climate change impacts that are abundantly clear, you can look at your own cost risks and see that climate change = droughts = risk to hydropower.

The alternative, right here and now, is solar and wind. We have enough hydro (droughts notwithstanding) to compensate for weather fluctuations of those sources.

As a utility, your job is to serve your customers and the best way to do that is ditch coal.

Thanks,

John

Dear Idaho Public Utilities Commission,

Please reject Rocky Mountain Power's plan. The climate crisis is so clear now, coal fired power plants must be phased out as soon as possible, not allowed to pollute for years to come.

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. As one of the region's largest utilities and largest polluters, the actions of this utility impact our entire state and all Idaho utility customers like me. Rocky Mountain Power's Plan relies on continued coal use even in the face of declining coal economics and Clean Air Act violations at its coal plants. It also relies on last minute plans to build new gas pipelines and convert some coal plants to gas, even in the face of highly volatile future gas prices. Lastly, it relies on a last minute plan to build a new nuclear power facility using never-before-used technology with an unrealistic timeline and budget. This all represents a huge risk for Idaho's future, from our air and the impacts of climate change down to our pocketbooks.

Our state's other public utilities, Avista and Idaho Power, plan to stop burning coal by 2025 and 2028, respectively, and are doubling down on investments in energy efficiency, renewable energy, and tested storage technology. It's unfair for Idaho customers whose only electric utility option is Rocky Mountain Power to face additional risks and costs from their utility's reckless planning. Idahoans deserve a utility Plan that ensures least cost and least risk energy supply that is based in reality and thoughtful planning, not wishful false solutions. Please reject Rocky Mountain Power's 2021 Integrated Resource Plan.

Sincerely,

Nancy Lamoreaux

Dear Idaho Public Utilities Commission,

It is outrageous that in this day and age we are still using coal for power. Climate change is unquestionably real and with multiple alternatives for power available, it is criminal to even consider accepting this request. Like a spoiled child who is never disciplined, Rocky Mountain Power has no incentive to change their strategy until someone says "NO." PUC, please stop the madness and just say "NO!"

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. Dear Idaho Public Utilities Commission,

I am thankful and proud to live in Idaho, though I did not grow up here. I love this state and hope to spend the rest of my life here. But I fear for our state and our country because of climate change.

My eyes were opened to climate change these last couple of summers when the smoke from wildfires was so thick that I had to keep my two young daughters inside for days, telling them the air was too bad for them to play outside. For a few days the smoke was so bad my employer shut down operations and I lost out on work. The more I've learned about climate change, I now know that we must fight it with everything we have, and make as much progress as soon as possible. I'm worried that we're running out of time.

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. As one of the region's largest utilities and largest polluters, the actions of this utility impact our entire state and all Idaho utility customers like me. Dear Idaho Public Utilities Commission,

I recently contacted you regarding Idaho Powers restrictive regulations on using solar (PV) generated credits on one building but not allowing individuals to utilize these credits on buildings in the same general area. Please take action to reduce these restrictions.

Also: I am VERY much opposed to allowing Rocky Mountain Power to continue to pollute and further impact our the lives of humans and all other species on this planet. Continued climate change IS having and WILL have profound impact on the human population. I am 72 years old. I am contacting you on behalf of my grand children who will have to deal with the impact of a ravaged world.

DO NOT allow Rocky Mountain Power to endanger the lives of my children and grand children.

Dr. Dave Makings

Dear Idaho Public Utilities Commission,

Our great, pristine State of Idaho is just beginning to see and wear the marks of a greater population, of more visitors who do not hold the same respect for our State. Please hold those we can account for change, to keep my home of 6 generations, clean and habitable for all. I realize as a nation today, we face many challenges. My hope is that we as a State prove once again to be the forerunners, finding a means to "clean" energy in balance with nature, as an example to the rest of the world.

Idaho is in my blood and soul. I am saddened by the angry people I now meet and the lack of love, care for that which makes Idaho unique. If I must fight the masses to enjoy what was once shared with a choice few, I do not want to experience graffiti, trash, or coal dust in my home. I ask we not be swayed by money, that we build a State not only of great beauty but a model for the world to follow. Generations to come deserve it, to be educated to respect and preserve it by our actions.

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. As one of the region's largest utilities and largest polluters, the actions of this utility impact our entire state and all Idaho utility customers like me. Rocky Mountain Power's Plan relies on continued coal use even in the face of declining coal economics and Clean Air Act violations at its coal plants. It also relies on last minute plans to build new gas pipelines and convert some coal plants to gas, even in the face of highly volatile future gas prices. Lastly, it relies on a last minute plan to build a new nuclear power facility using never-before-used technology with an unrealistic timeline and budget. This all represents a huge risk for Idaho's future, from our air and the impacts of climate change down to our pocketbooks.

Rocky Mountain Power's Plan relies on continued coal use even in the face of declining coal economics and Clean Air Act violations at its coal plants. It also relies on last minute plans to build new gas pipelines and convert some coal plants to gas, even in the face of highly volatile future gas prices. Lastly, it relies on a last minute plan to build a new nuclear power facility using never-before-used technology with an unrealistic timeline and budget. This all represents a huge risk for Idaho's future, from our air and the impacts of climate change down to our pocketbooks.

Our state's other public utilities, Avista and Idaho Power, plan to stop burning coal by 2025 and 2028, respectively, and are doubling down on investments in energy efficiency, renewable energy, and tested storage technology. It's unfair for Idaho customers whose only electric utility option is Rocky Mountain Power to face additional risks and costs from their utility's reckless planning. Idahoans deserve a utility Plan that ensures least cost and least risk energy supply that is based in reality and thoughtful planning, not wishful false solutions. Please reject Rocky Mountain Power's 2021 Integrated Resource Plan.

Sincerely,

Judy Scott

Dear Idaho Public Utilities Commission,

With our current global climate crisis It would seem imperative that all future development in energy generation should be focused on alternatives to the antiquated burning of fossil fuels in the generation of electric power. We have a wonderful opportunity to direct our development towards alternatives such as solar, wind, and more environmentally friendly electric generation and storage. In short, we need a plan that cares more for God's creation and less about the profits of large corporations.

Idaho deserves an energy plan that serves Idaho, not corporate profits. We need a plan that accurately represents transition timelines to coal workers and communities, prepares Idaho for a climate resilient future, and invests in the untapped potential of energy efficiency, renewable energy, and tested storage technology.

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. As one of the region's largest utilities and largest polluters the actions of this utility impact our entire state and all Idaho utility customers like me. Rocky Mountain Power's Plan relies on continued coal use even in the face of declining coal economics and Clean Air Act violations at its coal plants. It also relies on last minute plans to build new gas pipelines and convert some coal plants to gas, even in the face of highly volatile future gas prices. Lastly, it relies on a last minute plan to build a new nuclear power facility using never-before-used technology with an unrealistic timeline and budget. This all represents a huge risk for Idaho's future, from our air and the impacts of climate change down to our pocketbooks.

Dear Idaho Public Utilities Commission,

Low water supplies because of not enough snow, wildfires, dry forest leading to disease, these are all signs of increasing average temperature. It's all very scary. Where are we headed? Coal burning is one of the biggest causes of greenhouse warming. Rocky Mountain Power is obviously ignoring this fact. Please don't let them continue to pour carbon dioxide into the atmosphere. Coal, left underground, is sequestered carbon dioxide. Let's leave it there!

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. Dear Idaho Public Utilities Commission,

I think climate change is an existential problem for life as we know it. The Earth is warming more than most models predicted, not less. Any action that encourages burning coal to generate electricity for people to use seems like a bad idea and one that should be discouraged. What I've read about Rocky Mountain Power's proposal looks to be going in the wrong direction.

I'll admit to being uncertain about Rocky Mountain Power's proposal for fission generation of electricity long term. I understand that solar and wind won't always supply power for the grid, but I also remember people in New Mexico (where I grew up) contracting serious diseases and dying from mining fissile materials. Energy storage seems less dangerous to me and I'd like to see it encouraged.

Sincerely,

Steve Folkner

Dear Idaho Public Utilities Commission,

Rocky mountain power has a plan that is so unbelievable. I can't believe they would even have the nerve to ask for your blessing. Burning coal into forever is irresponsible to say the least. DO NOT ALLOW THIS PLAN TO HAPPEN!!

I am writing to urge you to not accept the Rocky Mountain Power 2021 Integrated Resource Plan for filing. As one of the region's largest utilities and largest polluters, the actions of this utility impact our entire state and all Idaho utility customers like me. Rocky Mountain Power's Plan relies on continued coal use even in the face of declining coal economics and Clean Air Act violations at its coal plants. It also relies on last minute plans to build new gas pipelines and convert some coal plants to gas, even in the face of highly volatile future gas prices. Lastly, it relies on a last minute plan to build a new nuclear power facility using never-before-used technology with an unrealistic timeline and budget. This all represents a huge risk for Idaho's future, from our air and the impacts of climate change down to our pocketbooks.

Our state's other public utilities, Avista and Idaho Power, plan to stop burning coal by 2025 and 2028, respectively, and are doubling down on investments in energy efficiency, renewable energy, and tested storage technology. It's unfair for Idaho customers whose only electric utility option is Rocky Mountain Power to face additional risks and costs from their utility's reckless planning. Idahoans deserve a utility Plan that ensures least cost and least risk energy supply that is based in reality and thoughtful planning, not wishful false solutions. Please reject Rocky Mountain Power's 2021 Integrated Resource Plan.

Sincerely,

Virginia Allen

Dear Idaho Public Utilities Commission,

Please REJECT the lazy and backward plan to continue coal-burning electricity generation as proposed by Rocky Mountain Power in their 20-year plan. Idaho deserves better from industries that operate in Idaho. Burning coal puts mercury into the air, surface waters, and aquatic wildlife and organisms, hence into my body. This is completely unacceptable. I am a cancer survivor. Such reckless industry practices, likely causing my cancer, should not be continued, especially since we KNOW their effects on the environment and human health.

Shannon Ansley

Dear Idaho Public Utilities Commission,

Dear Idaho Public Utilities Commission Members,

While Idaho Power and other utilities are moving to renewable, clean energy before 2040, Rocky Mountain Power is moving in the opposite direction. The latest report by the IPCC and Idaho's Climate Change Economic Impact reports, show that we must move to clean energy if we want our planet, economy and humans to be healthy. Idaho Power is showing that this is not only possible, but can be profitable.

There is no long term economic reason to move in the opposite direction. Please reject Rocky Mountain Power's Plan to continue to burn coal.

Best regards,

Laurie Zuckerman
