Address: 2111 W 113 N
Idaho Falls, ID 83402

Name of Utility Company: Rocky Mountain Power

Case ID: PAC-E-24-05

Comment: "Rocky Mountain Power should not have the ability to request back payment of funds from their customers. Those customers are already paying a more than honest sum that Rocky Mountain Power has required of them. Rocky Mountain Power has made this same request for additional funds multiple times, and they continue to request a larger sum each time. If the request is approved, then there is nothing to stop Rocky Mountain Power from continuing to make the same type of request of their customers in the future, which would be dishonest even further. If Rocky Mountain Power has invested their funds into energy saving devices and sustainable power sources, it would stand to reason that such investments would pay themselves back to Rocky Mountain Power, not increase the costs that Rocky Mountain Power must pay. If those types of investments are truly creating a debt for Rocky Mountain Power power, then Rocky Mountain Power should seek for energy sources elsewhere, in order for their expenditures to remain stationary per their customer contracts."
