Name of Utility Company: Rocky Mountain power

Case ID: PAC-E-25-02

Comment: "I am writing to oppose the request by Rocky Mountain power to decrease the customer generation credits for excess generated power from homeowners generation systems. We have currently invested over \$60000 on a solar system we are still trying to get up and running. Our struggles started in December 2023 after a now defunct solar company committed fraud to get paid for installing a photovoltaic system on our home and never finished. We have since been able to work with another company to finish the installation, passed inspection by Idaho dopl, and are currently waiting for Rocky Mountain power to inspect and change our meter for net billing. After all this, now we find out rmp wants to make our investment almost useless by lowering the credits for excess generation. Please do not approve this application. Although we still haven't seen any good from our system, this seems like the nail in the coffin. Customers that have invested so much to be responsible for creation of clean energy should not be penalized for it by the utility company.
