NEWS RELEASE: Commission Approves Asset Transfer Agreement Between Eastern Idaho Electric Utility and City

BOISE (Sept. 9, 2026) – The Idaho Public Utilities Commission has approved an application submitted by Rocky Mountain Power to transfer a customer and certain electric facilities serving that customer to the city of Idaho Falls.

A previously approved Service Allocation Agreement (SAA) approved by the Commission allows a customer's electric service to be transferred from one utility to another, provided that the acquiring utility compensates the serving utility for lost revenues and the distribution facilities used to provide service to that customer. The SAA also requires the acquiring utility to purchase any poles, wires, crossarms, insulators, guy wires and other facilities that are no longer necessary for the serving utility to provide electric service to the customer.

The Commission issued an order on Sept. 8, 2026, approving the transfer. It determined that the transfer promotes the public interest, provides fair compensation for the transferred assets without increasing rates for existing customers and ensures that the affected customer will continue to receive reliable electric service from Idaho Falls Power.
