Inspection Summary			
<p>A construction inspection was performed on Das-co, a contractor for Intermountain Gas Company.</p> <p>28 Oct 2019: (2.0 Construction)</p> <p>Observed a Dasco crew excavating for a new 6" main and fusing the new 6" pipe. While observing the fusing crew we noticed that they were not checking the iron temperature prior to fusing as per IGC procedural requirement. Prior to the next fuse I asked them to show me what the temperature of the iron was, they got the pyrometer and I asked to check the calibration date and it was within specs. They then proceeded to check the temps and it was reading between 448-450 degrees, and the required temps are 500 + or - 10 degrees per IGC procedure. At that time, we contacted IGC leadership and informed them of what had taken place and they sent IGC personnel and Das-Co to stop the job. They disqualified the fuser, and made the site safe for the day and stopped all work. Typed up report</p> <p>Areas observed during this project were: Excavating and Fusing</p> <p>Attachments: IPUC Form 4 Construction Inspections Das-co Daily Itineraries located in file for the project. OQ's for all observed employees are located in file for the project.</p>
