6. Special Access Service (Cont'd)

6.1 General (Cont'd)

6.1.7 Service Descriptions (Cont'd)

(E) Digital Data Service (Cont'd)

(4) Optional Features and Functions (Cont'd)

(c) Public Packet Switching Network Interface Arrangement

An arrangement that provides the interface requirements that permit a Digital Data Service to interface with a Public Packet Switching Network packet switch located in a Company premises. The interface is compatible with X.25 and X.75 packet switching protocols as defined by the CCITT.

(F) High Capacity Service

(1) Basic Circuit Description

A high capacity circuit is a circuit for the transmission of nominal 64.0 kbps or 1.544, 3.152, 6.312, 44.736, or 274.176 Mbps isochronous serial data. The actual bit rate is a function of the channel interface selected by the customer. High capacity circuits are provided between a customer designated premises or between a customer designated premises and a Company hub.

(3) Channel Interfaces

The following channel interfaces (CIs) define the bit rates that are available for a high capacity circuit:

<u>CI</u>	<u>Bit Rate</u>
DS-15*	1.544 Mbps (DS1)
DS-27	274.176 Mbps (DS4)
DS-31	3.152 Mbps (DSIC)
DS-44	44.736 Mbps (DS3)
DS-63	6.312 Mbps (DS2)

* A 64.0 Kbps channel is available as a channel(s) of a 1.544 Mbps channel to a Telephone Company hub.

Compatible channel interfaces are set forth in Section 9.

(4) Optional Features and Functions

(a) Automatic Loop Transfer

The Automatic Loop Transfer provides protection on a 1xN basis against failure of the facilities between a customer designated premises and the wire center serving that premises. Protection is furnished through the use of a switching arrangement that automatically switches to a spare circuit line when a working line fails. The spare circuit is not included as a part of the option. These options require compatible equipment at both the serving wire center and the customer premises. The customer is responsible for providing the equipment at its premises.

(b) Central Office Multiplexing

(i) DS4 to DS1

An arrangement that converts a 274.176 Mbps circuit to 168 DS1 circuits using digital time division multiplexing.

ACCESS SERVICE

6. Special Access Service (Cont'd)

6.2 Rate Regulations (Cont'd)

6.2.1 Types of Rates and Charges

There are three types of rates and charges. These are monthly rates, daily rates, and nonrecurring charges. The rates and charges are described as follows:

(A) Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a Special Access Service is provided. For billing purposes, each month is considered to have thirty (30) days.

(B) Daily Rates

Daily rates are flat recurring rates that apply to each 24 hour period or fraction thereof that a Program Audio Special Access Service is provided for part-time or occasional use. For the purposes of applying daily rates, the 24 hour period is not limited to a calendar day.

Part-time or occasional Program Audio Service provided within a consecutive thirty (30) day period will be charged the daily rate, not to exceed an amount equal to the monthly rate. For each subsequent day or part day, a charge equal to 1/30th of the monthly rate shall apply.

Juan D. Jewell SECRETARY

ACCESS SERVICE

6. Special Access Service (Cont'd)

6.2 Rate Regulations (Cont'd)

6.2.1 Types of Rates and Charges (Cont'd)

(C) Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for specific work activity (i.e., installation or change to an existing service). The types of nonrecurring charges that apply for Special Access Service are: installation of service, installation of optional features and functions, moves and changes, and service rearrangements. Changes to existing services other than administrative changes described in Section 5.7.1 (B)(2) will be treated as a discontinuance of the existing service and an installation of a new service.

If an additional leg is added to an existing multi-point service, nonrecurring charges will only apply to the additional termination.

Nonrecurring charges apply for each Channel Termination installed and are set forth in Section 10.

6.2.2 Minimum Periods

The minimum service period for all services except part-time and occasional Video and Program Audio services is one month. The minimum service period for part-time Television and Program Audio Special Access Services is one (1) day, even though the service will be provided only for the duration of the event specified on the order (i.e., one-half hour, two hours, five hours, etc.).

 SECRETARY

ACCESS SERVICE

6. Special Access Service (Cont'd)

6.2 Rate Regulations (Cont'd)

6.2.3 Mileage Measurement

The mileage to be used to determine the monthly rate for the Circuit Mileage is calculated on the airline distance between the locations involved, i.e., the serving wire centers associated with two customer designated premises, a serving wire center associated with a customer designated premises, and a Company hub, or two Company hubs. The serving wire center associated with a customer designated premises is the serving wire center from which this customer designated premises would normally obtain dial tone.

To determine the rate to be billed, first compute the mileage using the V&H coordinates method, then apply the rate shown. When the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage charges.

When hubs are involved, mileage is computed and rates applied separately for each of the Circuit Mileage, i.e., customer designated premises serving wire center to hub, hub to hub, and/or hub to customer designated premises serving wire center. However, when any service is routed through a hub for purposes other than customer specified bridging or multiplexing (i.e., the Company chooses to so route for test access purposes), rates will be applied only to the distance calculated between the serving wire centers associated with the customer designated premises.

ACCESS SERVICE

6. Special Access Service (Cont'd)

6.2 Rate Regulations (Cont'd)

6.2.3 Mileage Measurement (Cont'd)

When more than one Company is involved in the provision of Special Access Service, the mileage of the Circuit Mileage rate element for each Company is calculated.

6.2.4 Facility Hubs

- (A) A customer has the option of ordering voice grade facilities, analog, or digital high capacity facilities to a facility hub for channelizing to individual services requiring lower capacity facilities (i.e., Voice, program Audio, etc.).
- (B) Different locations may be designated as hubs for different facility capacities, i.e., multiplexing from digital to digital may occur at one location, which multiplexing from digital to analog may occur at a different location. When placing an Access Order the customer will specify the desired hub.
- (C) Some of the types of multiplexing available include the following:
- from higher to lower bit rate
 - from higher to lower bandwidth
 - from digital to voice frequency circuits

ACCESS SERVICE

6. Special Access Service (Cont'd)

6.2 Rate Regulations (Cont'd)

6.2.4 Facility Hubs (Cont'd)

- (D) End to end services may be provided on circuits of these facilities to a hub. The transmission performance for the end to end service provided between the customer designated premises will be that of the lower capacity or bit rate. For example, when a 1.544 Mbps facility is multiplexed to voice frequency circuits, the transmission performance of the channelized services will be Voice Grade, not High Capacity.
- (E) The Company will commence billing the monthly rate for the facility to the hub on the date specified by the customer on the Access Order. Individual services utilizing these facilities may be installed coincident with the installation of the facility to the hub or may be ordered and/or installed at a later date, at the option of the customer. The customer will be billed for a voice grade or a high capacity analog or digital Circuit Termination, Circuit Mileage (when applicable), and the multiplexer at the time the facility is installed. Individual service rates (by service type) will apply for a Circuit Termination and additional Circuit Mileage (as required) for each channelized service. These will be billed to the customer as each individual service is installed.
- (F) Cascading multiplexing occurs when a high capacity analog or digital circuit is de-multiplexed to provide circuits with a lesser capacity and one of the lesser capacity circuits is further de-multiplexed.

ACCESS SERVICE

6. Special Access Service (Cont'd)

6.2 Rate Regulations (Cont'd)

6.2.4 Facility Hubs (Cont'd)

- (G) When cascading multiplexing is performed, whether in the same or a different hub, a charge for the additional multiplexing unit also applies. When cascading multiplexing is performed at different hubbing locations, Circuit Mileage charges also apply between the hubs.
- (H) Although not requiring multiplexing, the Company will designate certain hubs for Video and Program Audio Services. Full-time service will be provided between a customer designated premises and a hub and billed accordingly at the monthly rates for a Circuit Termination, Optional Features and Functions, and Circuit Mileage, as applicable. The customer may order part-time and occasional Program Audio services as needed between that hub and a second customer designated premises. The rate elements required to provide the part-time or occasional service (i.e., Circuit Termination, Optional Features and Functions, and Circuit Mileage, as applicable) will be billed at daily rates for the duration of the service requested.

7. Additional Engineering, Additional Labor, and Miscellaneous Services

In this section, normally scheduled working hours are an employee's scheduled work period on any given business day, which totals eight (8) hours.

ACCESS SERVICE

7. Additional Engineering, Additional Labor, and Miscellaneous Services (Cont'd)

7.1 Additional Engineering

Additional Engineering, including engineering review, will be undertaken only after the Company has notified the customer that additional engineering charges apply and the customer agrees to such charges.

Additional Engineering will be provided by the Company at the request of the customer only when:

- 7.1.1 A customer requests additional technical information after the Company has already provided the technical information normally included on the Design Layout Report.
- 7.1.2 Additional Engineering time is incurred by the Company to engineer a customer's request for a customized service.

7.2 Additional Labor

Additional Labor is that labor requested by the customer on a given service and agreed to by the Company. The Company will notify the customer that Additional Labor charges will apply before any additional labor is undertaken. A call-out of a Company employee at a time not consecutive with the employee's scheduled work period is subject to a minimum charge of four hours.

7.2.1 Overtime Installation

Overtime installation is that Company installation effort outside of normally scheduled working hours.

7.2.2 Overtime Repair

Overtime repair is that Company effort performed outside of normally scheduled working hours.

ACCESS SERVICE

7. Additional Engineering, Additional Labor, and Miscellaneous Services (Cont'd)

7.2 Additional Labor (Cont'd)

7.2.3 Standby

Standby includes all time in excess of one-half (1/2) hour during which Company personnel standby to make installation acceptance tests or cooperative tests with a customer to verify facility repair on a given service.

7.2.4 Testing and Maintenance with Other Telephone Companies

Additional testing, maintenance, or repair of facilities which connect other telephone companies is that which is in addition to the normal effort required to test, maintain or repair facilities provided solely by the Company.

7.2.5 Testing Services

Testing Services other than those described in other parts of this tariff will be provided at the hourly rates described if requested by the customer. Testing will be provided subject to the availability of equipment and qualified personnel.

7.2.6 Other Labor

Other labor is that additional labor not included in 7.2.1 through 7.2.5, preceding, and labor incurred to accommodate a specific customer request that involves only labor which is not covered by any other section of this tariff.

ACCESS SERVICE

7. Additional Engineering, Additional Labor, and Miscellaneous Services (Cont'd)

7.3 Miscellaneous Services

7.3.1 Maintenance of Access Service

- (A) When a customer reports a trouble to the Company for clearance and the trouble is not found in the Company's facilities, the customer shall be responsible for payment of a Maintenance of Service Charge set forth in Section 10 for the period of time from when Company personnel are dispatched, at the request of the customer, to the customer designated premises to when the work is completed.
- (B) A call out of a company employee at a time not consecutive with the employee's scheduled work period is subject to a minimum charge of four hours.

7.3.2 Programming Service

- (A) Programming Service charges set forth in Section 10 apply when a request by a customer for information concerning the access services provided to the customer results in the creation of new computer software or the modification of existing software in order to provide the requested information. The Company will notify the customer that additional programming charges will apply before any additional programming is undertaken.
- (B) A call out of a Company employee at a time not consecutive with the employee's scheduled work period is subject to a minimum charge of four hours.

ACCESS SERVICE

7. Additional Engineering, Additional Labor, and Miscellaneous Services (Cont'd)

7.3 Miscellaneous Services (Cont'd)

7.3.3 Presubscription

(A) Description

Presubscription is a procedure whereby an end user or payphone service provider (PSP) may select and designate to the Company an Interexchange Carrier (IC) to access without dialing an access code. This procedure applies for both interLATA and intraLATA calls. This IC is referred to as the end user's or PSP's primary IC (PIC). An end user or PSP may select one PIC for both interLATA and intraLATA service, or they may choose to have two PICs, one for interLATA service and a different IC for intraLATA service.

The Presubscription procedure applies to Exchange Service lines and/or trunks, Switched Access line side connections, Centrex-type lines, and Public Access Line (PAL) Service.

Should a caller wish to use the services of an IC other than the PIC, it is necessary for the caller to dial the IC's access code(s) to reach that IC's service(s).

The terms and conditions for presubscription are following:

ACCESS SERVICE

7. Additional Engineering, Additional Labor, and Miscellaneous Services (Cont'd)

7.3 Miscellaneous Services (Cont'd)

7.3.3 Presubscription (Cont'd)

(B) Terms and Conditions

(1) Charge Application for Presubscription

- (a) End users or PSPs placing orders for new service will be asked to select a PIC at the time they place an order with the Company for Exchange Service lines and/or trunks, Switched Access line side connection, Centrex-type service, or PAL Service. There will be no charge for this selection.
- (b) Subsequent to the installation of Exchange Service, Switched Access line side connection, Centrex-type service, or PAL Service, for any change in selection, including a change from one access code to another access code for the same IC, a Presubscription charge as set forth in Section 10 applies.
- (c) When end users or PSPs simultaneously choose or change an intrastate and interstate PIC, only the interstate Presubscription charge will apply.

7.3.3 Presubscription (Cont'd)

(B) Terms and Conditions (Cont'd)

(1) Charge Application for Presubscription (Cont'd)

(d) The Presubscription charge for a PIC change is billed to the end user who is the customer to the Exchange Service, Switched Access line side connection, Centrex-type service, or to the PSP of PAL Service. However, an IC may, at its option, elect to pay the charge for any end user and/or PSP. When applicable, the Presubscription charge for a PIC change applies.

(2) Dispute Application for Presubscription

(a) If there is a conflict between an end user, a PSP, or their respective agent, on one hand, and the IC on the other hand, over the designation of the PIC, the Company will honor the designation selected by the end user, a PSP, or their respective agent, regardless of any contractual obligations the end user, PSP, or agent may have with one or more ICs.

(3) PIC Restoral (Cont'd)

(b) When a business or residence end user denies authorizing a PIC change, the Company will restore the end user to its previous IC. All PIC change charges assessed by the Company to the end user as a result of the disputed PIC change will be credited to the end user's Exchange Service, Switched Access line side connection, or Centrex-type service.

(c) The Presubscription charge will be assessed per line or trunk associated with the Exchange Service, Switched Access line side connection, or Centrex-type service.

(4) Cancellation of Interexchange Participation for Presubscription

(a) If an IC elects to discontinue all of its Feature Group D Service in an end office, the IC is obligated to do the following:

(i) Notify the Company of the cancellation of their Feature Group D Service, and;

(B) Terms and Conditions (Cont'd)

(4) Cancellation of Interexchange Participation for Presubscription (Cont'd)

- (a) If an IC elects to discontinue all of its Feature Group D Service in an end office, the IC is obligated to do the following: (Cont'd)
- (ii) Contact all end users or PSPs that are presubscribed to the canceling IC as their PIC. Inform these end users or PSPs of the cancellation and request that the end users or PSPs contact the Company to select a new PIC.
- (b) The Company will bill the canceling IC the Presubscription charge for each end user or PSP that this IC has currently redesignated to them. Such charge will not apply to the canceling IC where the canceling IC transfers or assigns its Feature Group D Service and the associated access code to another IC in such a manner that the Company does not change the end users' or PSPs' records or the end users' or PSPs' PIC designation, or if another IC elects to pay the Presubscription charge on behalf of the canceling IC.

(C) IC Initiated Conversions for Presubscription

When an IC requests that their end user or PSP be changed from one access code to another access code on a mass conversion basis (i.e., an IC using two or more PIC designations or an IC assuming ownership of another IC's end users, etc), the Presubscription charge will apply.

8. Special Construction

8.1 General

The rates and charges for special construction are determined on a time and material basis where facilities permit. All rates and charges quoted in other sections of this document provide for the furnishing of service when suitable facilities are available or where the construction of the necessary facilities does not involve unusual costs. The General Regulations apply to Special Construction.

8.2 Conditions Requiring Special Construction

8.2.1 Special construction is required when the facilities to provide services are not available and, at the request of the customer, the Company agrees to construct facilities to provide the services for the customer and there is no other requirement for the facilities so constructed, or

8.2 Conditions Requiring Special Construction (Cont'd)

- 8.2.2 The facilities are of a type other than that which they would normally furnish in order to provide services for the customer, or
- 8.2.3 In order to comply with requirements specified by the customer, construction by the Company involves a routing of facilities other than that which they would normally utilize to provide services for the customer, or
- 8.2.4 At the request of the customer, the Company constructs a greater quantity of facilities than that which they would otherwise construct in order to fulfill the customer's initial requirements for service, or
- 8.2.5 The facilities to provide services are not available and, at the request of the customer, the Company expedites construction of the facilities at greater expense than would otherwise be incurred, or
- 8.2.6 The facilities to provide services are not available and, at the request of the customer, the Company constructs temporary facilities to provide services for the period during which the permanent facilities are under construction.

9. Interface Groups, Transmission Specifications, and Channel Interfaces

9.1 Local Transport Interface Groups

Ten Interface Groups are provided for terminating the Local Transport at the customer's premises. Each Interface Group provides a specified premises interface (i.e., two-wire, four-wire, DS1, etc).

ACCESS SERVICE

9. Interface Groups, Transmission Specifications, and Channel Interfaces (Cont'd)

9.1 Local Transport Interface Groups (Cont'd)

As a result of the customer's access order and the type of Company transport facilities serving the customer's premises, the need for signaling conversions or two-wire to four-wire conversions, or the need to terminate digital or high frequency facilities in channel bank equipment may require that Company equipment be placed at the customer's premises. For example, if a voice frequency interface is ordered by the customer and the Company facilities serving the customer's premises are digital, then Company channel bank equipment must be placed at the customer's premises in order to provide the voice frequency interface ordered by the customer.

Interface Group 1 is provided with Type C Transmission Specifications, and Interface Groups 2 through 10 are provided with Type A or B Transmission Specifications, depending on the Feature Group and whether the Access Service is routed directly or through an access tandem. All Interface Groups are provided with Data Transmission Parameters.

Only certain premises interfaces are available at the customer's premises. The premises interfaces associated with the Interface Groups may vary among Feature Groups. The various premises interfaces which are available with the Interface Groups, and the Feature Groups with which they may be used as follows:

9.1.1 Interface Group 1

- (A) Interface Group 1, except as set forth in the following, provides two-wire voice frequency transmission at the point of termination at the customer's premises. The interface is capable of transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

9.1.1 Interface Group 1 (Cont'd)

- (B) Interface Group 1 is not provided in association with FGC and FGD when the first point of switching is an access tandem. In addition, Interface Group 1 is not provided in association with FGB, FGC, or FGD when the first point of switching provides only four-wire terminations.
- (C) The transmission path between the point of termination at the customer's premises and the first point of switching may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of 300 to 3000 Hz.
- (D) The interface is provided with loop supervisory signaling. When the interface is associated with FGA, such signaling will be loop start or ground start signaling. When the interface is associated with FGB, FGC, or FGD, such signaling, except for two-way calling, which is E&M signaling, will be reverse battery signaling.

9.1.2 Interface Group 2

- (A) Interface Group 2 provides four-wire voice frequency transmission at the point of termination at the customer's premises. The interface is capable of transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

9.1.3 Interface Group 3

Interface Group 3 provides group level analog transmission at the point of termination at the customer's premises. The interface is capable of transmission electrical signals between the frequencies of 60 to 180 kHz, with the capability to channelize up to 12 voice frequency transmission paths. Certain frequencies within the bandwidth of the Interface Group are reserved for Company use, i.e., pilot and carrier group alarm tones. Before the first point of switching, the Company will provide multiplex equipment to derive 12 transmission paths of frequency bandwidth of approximately 300 to 3000 Hz. The interface is provided with individual transmission path SF supervisory signaling.

9. Interface Groups, Transmission Specifications, and Channel Interfaces (Cont'd)

9.1 Local Transport Interface Groups (Cont'd)

9.1.6 Interface Group 6

Interface Group 6 provides DS1 level digital transmission at the point of termination at the customer's premises. The interface is capable of transmitting electrical signals at a nominal 1.544 Mbps, with the capability to channelize up to 24 voice frequency transmission paths. Before the first point of switching, when analog switching utilizing analog terminations is provided, the Company will provide multiplex and channel bank equipment to derive 24 transmission paths of a frequency bandwidth of approximately 300 to 3000 Hz. When digital switching or analog switching with digital carrier terminations is provided, the Company will provide, at the first point of switching, a DS1 signal in D3/D4 format. The interface is provided with individual transmission path bit stream supervisory signaling.

9.1.7 Interface Group 7

Interface Group 7 provides DS1C level digital transmission at the point of termination at the customer's premises. The interface is capable of transmitting electrical signals at a nominal 3.152 Mbps, with the capability to channelize up to 48 voice frequency transmission paths. Before the first point of switching, when analog switching utilizing analog terminations is provided, the Company will provide multiplex and channel bank equipment to derive up to 48 voice frequency transmission paths of a frequency bandwidth of approximately 300 to 3000 Hz. When digital switching or analog switching with digital carrier terminations is provided, the Company will provide, at the first point of switching, DS1 signals in D3/D4 format. The interface is provided with individual transmission path bit stream supervisory signaling.

9.1.8 Interface Group 8

Interface Group 8 provides DS2 level digital transmission at the point of termination at the customer's premises. The interface is capable of transmitting electrical signals at a nominal 6.312 Mbps, with the capability to channelize up to 96 transmission paths. Before the first point switching, when analog switching utilizing analog terminations is provided, the Company will provide multiplex and channel bank equipment in its office to derive up to 96 transmission paths of a frequency bandwidth of approximately 300 to 3000 Hz. When digital switching, or analog switching with digital carrier terminations is provided, the Company will provide, at the first point of switching, DS1 signals in D3/D4 format. The interface is provided with individual transmission path bit stream supervisory signaling.

9.1.9 Interface Group 9

Interface Group 9 provides DS3 level digital transmission at the point of termination at the customer's premises. The interface is capable of transmitting electrical signals at a nominal 44.736 Mbps, with the capability to channelize up to 672 voice frequency transmission paths. Before the first point of switching, when analog switching utilizing analog terminations is provided, the Company will provide multiplex and channel bank equipment to derive up to 672 transmission paths of a frequency bandwidth of approximately 300 to 3000 Hz. When digital switching, or analog switching with digital carrier terminations is provided, the Company will provide, at the first point of switching, DS1 signals in D3/D4 format. The interface is provided with individual transmission path bit stream supervisory signaling.

9.1 Local Transport Interface Groups (Cont'd)

9.1.12 Supervisory Signaling (Cont'd)

(B) For Interface Group 2

SF Supervisory Signaling, or
Tandem Supervisory Signaling.

(C) For Interface Groups 6 through 10

These Interface Groups may, at the option of the customer, be provided with individual transmission path SF supervisory signaling where such signaling is available in Company central offices. Generally such signaling is available only where the entry switch provides an analog; i.e., nondigital, interface to the transport termination.

9.2 Transmission Specifications Switched Access Service

Each Switched Access Service transmission path is provided with standard transmission specifications. There are three different standard specifications (Types A, B, and C). The standard for a particular transmission path is dependent on the Feature Group, the Interface Group, and whether the service is directly routed or via an access tandem. Data Transmission parameters are also provided with each Switched Access Service transmission path. The Company will, upon notification by the customer that the data parameters are not being met, conduct tests independently or in cooperation with the customer, and take any necessary action to ensure that the data parameters are met.

9.2.1 Standard Transmission Specifications (Cont'd)

(A) Type A Transmission Specifications (Cont'd)

(2) Attenuation Distortion

The maximum Attenuation Distortion in the 404 to 2804 Hz frequency band relative to the loss 1004 Hz is -1.0 dB to +3.0 dB.

(3) C-Message Noise

The maximum C-Message Noise for the transmission path at the route miles listed is less than or equal to:

<u>Route Miles</u>	<u>C-Message Noise*</u>	
	<u>Type B2</u>	<u>Type B1</u>
less than 50	35 dBrnCO	32 dBrnCO
51 to 100	37 dBrnCO	33 dBrnCO
101 to 200	40 dBrnCO	35 dBrnCO
201 to 400	43 dBrnCO	37 dBrnCO
401 to 1000	45 dBrnCO	39 dBrnCO

* For Feature Group C and D only Type B2 will be provided. For Feature Groups A and B, Type B1 or B2 will be provided as set forth in Technical Reference PUB 62500.

9.2.2 Data Transmission Parameters

Two types of Data Transmission Parameters, i.e., Type DA and Type DB, are provided for the Feature Group arrangements. These are described as follows:

(A) Data Transmission Parameters Type DA

(1) Signal to C-Notched Noise Ratio

The Signal to C-Notched Noise Ratio is equal to or greater than 33 dB.

(2) Envelope Delay Distortion

The maximum Envelope Delay Distortion for the frequency bands and route miles specified is:

604 to 2804 Hz

less than 50 route miles	500 microseconds
equal to or greater than 50 route miles	900 microseconds

ACCESS SERVICE

9. Interface Groups, Transmission Specifications, and Channel Interfaces (Cont'd)

9.3 Special Access Channel Interface and Network Channel Codes (Cont'd)

9.3.2 Impedance

The nominal reference impedance with which the channel will be terminated for the purpose of evaluating transmission performances.

<u>Value (ohms)</u>	<u>Code(s)</u>
110	0
150	1
600	2
900	3+
135	5
75	6
124	7
Variable	8
100	9

+ For those interface codes with a 4-wire transmission path at the customer designated POT, rather than a standard 900 ohm impedance the code (3) denotes a customer-provided transmission equipment termination. Such terminations were provided to customers in accordance with the F.C.C. Docket No. 20099 Settlement Agreement.

ACCESS SERVICE

9. Interface Groups, Transmission Specifications, and Channel Interfaces (Cont'd)

9.3 Special Access Channel Interface and Network Channel Codes (Cont'd)

9.3.3 Digital Hierarchy Channel Interface Codes (4DS)

Customers selecting the multiplexed four-wire DSX-1 or higher facility interface option at the customer designated premises will be requested to provide subsequent system and channel assignment data. The various digital bit rates in the digital hierarchy employ the channel interface code 4DS8, 4DS0, or 4DS6 plus the speed options indicated below:

<u>Interface Code and Speed Option</u>	<u>Nominal Bit Rate (Mbps)</u>	<u>Digital Hierarchy Level</u>
4DS8-15	1.544	DS1
4DS8-31	3.152	DS1C
4DS0-63	6.312	DS2
4DS6-44	44.736	DS3
4DS6-27	274.176	DS4

9.3.4 Service Designator/Network Channel Code Conversion Table

The purpose of this table is to show the relationship between the service designator codes (e.g., VGC, MT2, etc.) and the network channel codes that are used for:
