BEFORE THE IDAHO PUBLIC UTILITIES COMMISSION

IN THE MATTER OF THE APPLICATION OF)
ROCKY MOUNTAIN POWER FOR APPROVAL) **CASE NO. PAC-E-07-05**
OF CHANCES TO ITS ELECTRIC SERVICE)
SCHEDULES)
_____)

**APPLICATION FOR INTERVENOR FUNDING OF
THE IDAHO IRRIGATION PUMPERS ASSOCIATION, INC.**

COMES NOW the Idaho Irrigation Pumpers Association, Inc. ("Irrigators"), by and through counsel of record, Eric L. Olsen, and hereby respectfully makes application to the Idaho Public Utilities Commission ("Commission") for intervenor funding, pursuant to Idaho Code § 61-617A and IDAPA 31.01.01.161 through .165, in Rocky Mountain Power's ("RMP") general rate case, as follows:

(A) A summary of the expenses that the Irrigators request to recover broken down into legal fees, consultant fees and other costs and expenses is set forth in Exhibit "A" attached hereto and incorporated by reference. Itemized statements are also included as Attachments 1 and 2 to Exhibit "A" in support of said summary and are incorporated by reference.

(B) The Irrigators' President, Mark Mickelsen, board member, Stan Searle, legal counsel, Eric L. Olsen, and consultant, Anthony J. Yankel, P.E., fully participated in these proceedings.

Procedurally, this case went forward like a full blown rate case with direct and rebuttal testimony being filed. This case also had greater significance to the Irrigators given the devastating loss of the BPA Credit in May of this year.

The Irrigators' President, Mark Mickelsen, urged the Commission that the loss of the BPA credit and RMP's proposed rate increase will cause serious rate shock to the irrigation class going forward. Mr. Mickelsen further urged that one tool that the Irrigators have to help mitigate the loss of the BPA Credit and RMP's pending rate increase is to participate in RMP's load control programs. Mr. Mickelsen urged that the Commission must increase the credit paid to the Irrigators who participate in the load control programs.

Irrigators board member, Stan Searle, testified that he did not participate in RMP's load control programs in 2007 due to his determination that the credit RMP gave to participants of the programs did not outweigh the risks of covering his sunk planting costs and the possibility of losing yields and crop quality if sufficient water was not applied to his crops. Mr. Searle testified that he would participate in the load control programs in the future if the credit for participation in these programs is large enough to outweigh the risks of participation.

The Irrigators' consultant, Anthony Yankel, urged Commission that because of the situs treatment of the load control credit given to Irrigators, the revenue requirement for Residential and all other Idaho customers was unjustifiably increased, the more Irrigators join in the load control programs. He recommended that the Commission treat the irrigation load control programs as system benefit resources, and not as its present situs cost allocation. Mr. Yankel urged the Commission that RMP's load research data does not fully reflect the level of Irrigation load curtailment, and thus, RMP's cost of service study attributes too much demand to the Irrigators and

thus, increases the costs allocated to the irrigation class. Mr. Yankel recommended that the Commission adjust the Company's coincident peak data for the Irrigators in order to reflect the actual level of load curtailment that is taking place and thereby increase the rate of return for the Irrigators and therefore further recommending that the Irrigators get no more than 2/3 of the average jurisdictional percentage rate increase. Mr. Yankel further urged the Commission that the present load control credit for Irrigation customers is considerably below the benefit provided to the system. He recommended to the Commission that the load control credit be increased by \$40/kW-year, in order to bring more Irrigators into the program, benefit the entire system at a cost less than avoided cost, and to provide an overall benefit to the system that is greater than what is presently being realized. Mr. Yankel further urged the Commission to establish time-of-day rates for the Irrigators as an additional option that could both benefit the system and the customers that choose that rate.

After continuing to prepare for the technical hearings, RMP and the Irrigators reached an agreement for the settlement of this case late in the evening of November 4, 2007. This was the result of active participation of Mr. Mickelsen, Mr. Searle and other Irrigators board members, Mr. Olsen, and Mr. Yankel. Key elements of the Irrigators' positions that were put forth before the Commission were included in the stipulation, principally the equal percentage rate increase for the irrigation class and the participation based increase in the dispatchable load control credit. The Irrigators were present at the technical hearing before the commission on November 6, 2007, and urged the Commission to adopted the settlement that had been reached between all parties.

(C) The expenses and costs incurred by the Irrigators set forth in Exhibit A and accompanying attachments are reasonable in amount and were necessarily incurred. The expenses and costs were incurred in reviewing the Company's filing and intervenor testimony, preparing and

reviewing approximately 84 Irrigators' data requests and responses, drafting and filing direct testimony, drafting sur rebuttal testimony, preparing summary testimony and attending public hearings, drafting cross-examination questions for the Company and intervenor witnesses, and participating in the settlement discussions that resulted in the settlement stipulation that was presented to the Commission.

(D) The costs described in Paragraph (A) above constitute a financial hardship for the Irrigators. The Irrigators currently have approximately \$16,000.00 in the bank. Accounts payable for legal and consultant fees and costs in this case total \$66,027.12 as set out in Exhibit "A" and accompanying attachments, none of which have been paid.

The Irrigators are an Idaho nonprofit corporation qualified under I.R.C. § 501(c)(5) representing farm interests in electric utility rate matters affecting farmers in southern and central Idaho. The Irrigators rely solely upon dues and contributions voluntarily paid by members, together with intervenor funding to support activities and participate in rate cases. Each year mailings are sent to approximately 7500 Idaho Irrigators (approximately two-thirds in the Idaho Power Company service area and one-third in the RMP service area), soliciting annual dues. The Irrigators recommend members make voluntary contributions based on acres irrigated or horsepower per pump. Member contributions have been falling which are believed to be attributable to the depressed agricultural economy and increased operating costs and threats, particularly those relating to water right protection issues.

From member contributions the Irrigators must pay all expenses, which generally include mailing expenses, meeting expenses and shared office space in Boise, Idaho, in addition to the expenses relating to participation in rate cases. The Executive Director, Lynn Tominaga, is the only

part-time paid employee, receiving a retainer plus expenses for office space, office equipment, and secretarial services. Officers and directors are elected annually and serve without compensation.

It has been and continues to be a financial hardship for the Irrigators to fully participate in all rate matters affecting its members. As a result of financial constraints, participation in past rate cases and in this case has been selective and, primarily, on a limited basis. The Irrigators also have been concurrently participating in the Idaho Power Company general rate case, which is adding additional financial strain on the organization.

(E) The Irrigators' positions urged to be adopted by the Commission materially differed from those addressed by the Commission Staff and other parties on several important points. First, the principal tool the Irrigators have to help control their energy costs is voluntary participation in RMP's load control programs. The Irrigators provided direct testimony that the load control credit amounts must be increased to encourage greater participation, to help the Irrigators have a viable option to use in mitigating the loss of the BPA Credit, and to bring the credit in line with the benefit received by RMP and the whole Pacifcorp system. In the Stipulation, RMP has promised to provide the Irrigators and Commission Staff with the methodology to value the credit in the future. The Commission Staff did not address these load control issues that the Irrigators had raised. Secondly, the Irrigators urged the adoption of an irrigation time-of-use rate. The Irrigators believe that this type of voluntary program could also help reduce Idaho's peak electricity use like the load control programs currently in place. The Commission Staff did not address this issue.

(F) The Irrigators' participation addressed issues of concern to the general body of users or consumers on RMP's and Pacificorp's system. The irrigation load control programs have enabled RMP to shave approximately 50 to 75 mwh of load during the summer system peak in 2006 and

2007. This reduction in peak load benefits all Idaho customer classes by reducing the overall system costs allocated to Idaho. This translates into lower rate increases when rate cases are filed. Continuation and expansion of the irrigation load control programs may also defer the building of additional generation plant as indicated in PacifiCorp's 2007 Integrated Resource Plan. Avoiding these type of costs is also a benefit to all of RMP's Idaho tariff customers.

(G) The Irrigators represent the irrigation class of customers under Schedule 10.

Based on the foregoing, it is respectfully submitted that the Irrigators are a qualifying intervenor and should be entitled to an award of costs of intervention in the maximum amount allowable pursuant to Idaho Code § 61-617A and IDAPA 31.01.01.161 through .165.

DATED this 19th day of November, 2007.

IDAHO IRRIGATION PUMPERS ASSOCIATION, INC.
PACIFICORP/RMP 2007 GENERAL RATE CASE

Attachment 2

<u>Date</u>	<u>Hours</u>	<u>Description</u>
June 1	1	Review various material filed by UP&L regarding commitments; request copies of the 2007 IRP.
12	4	Review historical FERC Form 1 data in order to develop relationships between historic usages of various customer classes and a manner similar to that presented in IPCo.
15	5	Review cost of service study results, allocators, and changes in allocation factors and billing determinants from previous case.
18	4	Read portions of the filing and testimony of Walje; review how Walje testimony fits with where the irrigation load is and how the Idaho load has developed.
19	4	Review testimony of McDougal and begin to develop interrogatories.
21	3	Review testimony of Widmer; review his listing of costs and cost changes; compare changes in costs with historical records from other data
22	6	Review testimony of Tucker and Griffith as well as associated exhibits; do calculations in order to check exhibits; develop and finalize final set of interrogatories.
July 2	7	Review testimony of Walje and develop interrogatories regarding distribution plant in Idaho; Review McDougal testimony and develop interrogatories regarding system wide new plant, the BPA credit and
3	4	Review McDougal testimony and develop interrogatories regarding Irrigation Load Control, and DSM; review testimony of Widmer and develop questions regarding net power costs.
16	7	Break out June and July data for Irrigation load research for 2003 so as to develop an individual profile of usage for Irrigators for the whole summer; use these profiles to review the ability to develop time-of-use rates for the irrigation class.
18	8	Break out August and September data for Irrigation load research for 2003 so as to develop an individual profile of usage for Irrigators for the whole summer; use these profiles to review the ability to develop time-of-use rates for the irrigation class.
19	7	Aggregate load research data for 2003 and substitute Monday loads for Sundays and visa versa; determine impact of change of usage when incorporating time of day rates.
20	8	Aggregate load research data for 2003 and substitute Thursday and Friday loads for Saturday and Sundays and visa versa; determine impact of change of usage when incorporating time of day rates.

<u>Date</u>	<u>Hours</u>	<u>Description</u>
23	7	Aggregate load research data for 2003 and substitute largest use loads for Saturday and Sundays and visa versa; determine impact of change of usage when incorporating time of day rates.
24	8	Review data responses to for Monsanto; review impact of load growth on Residential, Commercial, and Irrigation customers; develop interrogatories dealing with time of use.
26	3	Review data responseses to Staff Request 1 and data responses to Monsanto Request 2.
27	3	Review responses to Staff data requests as well as responses to requests made by Monsanto.
30	8	Develop interrogatories related to Net Power Cost; the basis of the load that goes into the Net Power Cost model; and the establishment of a number of scenarios regarding shifting in time of use and the resulting impact upon system costs and Idaho jurisdictional costs; develop 4th set
31	4	Review the Company's responses to Monsanto's 2nd set of interrogatories and review the various attachments that support these responses.
Aug 2	4	Review different impacts of rates under existing Schedules 1 and 36 with Schedule 10 and 72 in order to determine relative impacts of time of day rates on the various irrigation rate schedules.
6	7	Read the Company's recent report written by Quantec regarding an assessment of long-term system-wide potential for demand side and other supplemental resources. Review appendices as well.
7	7	Read the Company's recent report written by Quantec regarding an assessment of long-term system-wide potential for demand side and other supplemental resources. Review appendices as well. Develop interrogatories.
15	7	Review load research data from 2003 to develop patterns of usage for different sided (strata) irrigators in order to review the possibility of time of day rates being an effective way to shift load.
20	3	Review load research data from 2003 to develop patterns of usage for different sided (strata) irrigators in order to review the possibility of time of day rates being an effective way to shift load.
22	2	Review responses to Irrigator's first data set; look for problems with the responses and develop additional data requests as needed.
